You use the RECOVER command to perform point-in-time recovery of one or more PDBs. However, to recover PDBs, you must connect to the root as a user with SYSDBA or SYSBACKUP privilege.  
D: DB\_FLASHBACK\_RETENTION\_TARGET specifies the upper limit (in minutes) on how far back in time the database may be flashed back. How far back one can flashback a database depends on how much flashback data Oracle has kept in the flash recovery area. Range of values 0 to 231 - 1
