NEW QUESTION: 1You need to identify the methods for dividing the data according to the testing requirements.Which properties should you select? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.**Answer:**
Explanation:ExplanationScenario: TestingYou must produce multiple partitions of a dataset based on sampling using the Partition and Sample module in Azure Machine Learning Studio.
Box 1: Assign to foldsUse Assign to folds option when you want to divide the dataset into subsets of the data. This option is also useful when you want to create a custom number of folds for cross-validation, or to split rows into several groups.Not Head: Use Head mode to get only the first n rows. This option is useful if you want to test a pipeline on a small number of rows, and don't need the data to be balanced or sampled in any way.Not Sampling: The Sampling option supports simple random sampling or stratified random sampling. This is useful if you want to create a smaller representative sample dataset for testing.Box 2: Partition evenlySpecify the partitioner method: Indicate how you want data to be apportioned to each partition, using these options:* Partition evenly: Use this option to place an equal number of rows in each partition. To specify the number of output partitions, type a whole number in the Specify number of folds to split evenly into text box.Reference:
