modify the Replication Configuration settings. Enable replication for VM1.**D.** On Server1, install the Multipath I/O (MPIO) feature. Modify the storage location of the VHDs for VM1.**Answer: A**  
Explanation:Explanation/Reference:Explanation:You first have to enable replication on the Replica server--Server1--by going to the server and modifying the "Replication Configuration" settings under Hyper-V settings. You then go to VM1--which resides on Server2-- and run the "Enable Replication" wizard on VM1.

**NEW QUESTION: 4**A security administrator would like to ensure that system administrators are not using the same password for both their privileged and non-privileged accounts. Which of the following security controls BEST accomplishes this goal?**A.** Require shorter password expiration for privileged accounts**B.** Require different account passwords through a policy**C.** Require shorter password expiration for non-privileged accounts**D.** Require a greater password length for privileged accounts**Answer: B**  
Explanation:A password policy aka account policy enforcement can be configured in such a way so as to make sure that system administrators make use of different passwords for different accounts.Incorrect Answers:B. Password expiration does not enforce the use of different passwords for different accounts. It is used as a disablement tool.C. Shorter password expiration is still just a disablement tool and will not enforce the use of different passwords for different accounts.D. Password length serves to make it more complex so as to strengthen the password and not to enforce the use of different passwords for different accounts.References:Stewart, James Michael, CompTIA Security+ Review Guide, Sybex, Indianapolis, 2014, pp. 291, 293
