NEW QUESTION: 1Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You are designing an Azure SQL Database that will use elastic pools. You plan to store data about customers in a table. Each record uses a value for CustomerID.You need to recommend a strategy to partition data based on values in CustomerID.Proposed Solution: Separate data into shards by using horizontal partitioning.Does the solution meet the goal?**A. Yes****B. No****Answer: A**Explanation: Horizontal Partitioning - Sharding: Data is partitioned horizontally to distribute rows across a scaled out data tier. With this approach, the schema is identical on all participating databases. This approach is also called "sharding". Sharding can be performed and managed using (1) the elastic database tools libraries or (2) selfsharding.An elastic query is used to query or compile reports across many shards.References:

NEW QUESTION: 2You work as a Project Manager for Tech Perfect Inc. You are looking for performance efficiencies of a project. The related key values are provided in the table below: What will be the cost variance (CV) of the project at the current point of time?**A. +10****B. 0****C. +80****D. -80****Answer: D**Explanation:Explanation/Reference:Explanation:According to the question, you are required to calculate the cost performance index (CPI) of the project.Cost variance (CV) is a measure of cost performance on a project. The variance notifies if costs are higher than budgeted or lower than budgeted. The cost variance is calculated based on the following formula: $CV = \text{Earned Value (EV)} - \text{Actual Cost (AC)}$ A positive value means that spending is less than budgeted, whereas a negative value indicates that costs are higher than originally planned for the project. Now, putting the provided values in the formula: $CV = EV - AC = 320 - 400 = -80$ As the value of CV (which is -80) is negative, it shows that the costs are higher than that have been planned for the project. What is BCWP (or EV)? Budgeted cost of work performed (BCWP) or Earned Value (EV) is the value of completed work. It is the budgeted amount for the work actually completed on the schedule activity during a given time period. What is BCWS (or PV)? Budgeted Cost of Work Scheduled (BCWS) or Planned Value (PV) is the authorized budget assigned to the scheduled work to be accomplished for a schedule activity or Work Breakdown Structure (WBS) component. What is ACWP (or AC)? Actual cost of work

performed (ACWP) or Actual Cost (AC) is the total costs actually incurred and recorded in accomplishing work performed during a given time period for a schedule activity. It is the cost of the work to date, including direct and indirect costs. AC is money that has actually been expended to date.

NEW QUESTION: 3 Which configuration component is Source Document Type NOT connected to?
A. Revenue Price Profile
B. Performance Obligation Identification Rules
C. Performance Obligation Template
D. Revenue Management System Options
E. Contract Identification Rules
Answer: A

NEW QUESTION: 4 What are two benefits of installing Grid Infrastructure software for a stand-alone server before installing and creating an Oracle database?
A. Enables the Installation of Grid Infrastructure files on block or raw devices.
B. Enables you to take advantage of Oracle Managed Files.
C. Automatically registers the database with Oracle Restart.
D. Effectively implements role separation
E. Helps you to easily upgrade the database from a prior release.
Answer: C, D
Explanation: C: To use Oracle ASM or Oracle Restart, you must first install Oracle Grid Infrastructure for a standalone server before you install and create the database. Otherwise, you must manually register the database with Oracle Restart. Desupport of Block and Raw Devices With the release of Oracle Database 11g release 2 (11.2) and Oracle RAC 11g release 2(11.2), using Database Configuration Assistant or the installer to store Oracle Clusterware or Oracle Database files directly on block or raw devices is not supported. If you intend to upgrade an existing Oracle RAC database, or an Oracle RAC database with Oracle ASM instances, then you can use an existing raw or block device partition, and perform a rolling upgrade of your existing installation. Performing a new installation using block or raw devices is not allowed. References:
