When you start, there will be a timer to help you to [SOA-C02 Free Test Questions](#) time, so that you can finish the problem within the prescribed time and it can create an environment.

**NEW QUESTION: 1**The Chief Executive Officer (CEO) of Company Y has recently attended a series of presentations on the six key roles that the World Economic Forum (WEF) recommend organisations fulfil in order to succeed in the digital age. The CEO is particularly interested in changing the focus of Y from a five year, to a one year planning cycle, with more focus on experimentation and less focus on long-term planning. Which of the six roles suggested by the WEF is the CEO particularly interested in?  
**A.** Operational excellence driver  
**B.** Strategic planner  
**C.** Innovation promoter  
**D.** Driver of information-based business models  
**Answer: B**

**NEW QUESTION: 2**You have a server named Server1 that runs Windows Server 2016. The Docker daemon runs on Server1. You need to configure the Docker daemon to accept connections only on TCP port 64500. What should you do?  
**A.** Run the sc config command.  
**B.** Run the sc control command.  
**C.** Modify the routing table on Server1.  
**D.** Run the New-NetFirewallRule cmdlet.  
**Answer: A**  
Explanation: Explanation/Reference: Explanation: The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at 'c:\ProgramData\dockerconfig\daemon.json'. The Docker Engine can also be configured by modifying the Docker service using sc config. Using this method, Docker Engine flags are set directly on the Docker service. Run the following command in a command prompt (cmd.exe not PowerShell):  
sc config docker binpath=""C:\Program Files\docker\dockerd.exe" --run-service -H tcp://0.0.0.0:64500"  
Note: You do not need to run this command if your daemon.json file already contains the "hosts":["tcp://0.0.0.0:64500"] entry.
