**NEW QUESTION: 2A.** TPMD (Thermal Power Management Device) **B.** Energy Scale Technology **C.** POWER7 processor mode **D.** CAPI **Answer: D**  
Explanation: IT organizations must provide increased system performance as their workloads grow with demands for big data analysis, social media applications, continuous customer connectivity, and business-specific applications. Increases in processor performance alone cannot satisfy the workload demands, so solutions must also come from system-level advances such as hybrid computing, processing engine customization, and open platform development that enables cross-company innovation. The Coherent Accelerator Processor Interface (CAPI) on IBM® POWER8 systems provides solution architects with a new way to gain system-level performance. CAPI connects a custom acceleration engine to the coherent fabric of the POWER8 chip. The hybrid solution has a simple programming paradigm while delivering performance well beyond today's I/O attached acceleration engines.
