NEW QUESTION: 1 A client is implementing Accounts payable. The client wants to establish three-way matching for 100 of their 5,000 stocked items from a specific vendor. The client requires the ability to have items that require only two-way matching and specific items that require three-way matching. You need to configure the system in the most efficient manner to achieve these requirements. What should you do? **A.** Configure a company matching policy of non-required and specify the items that require a three-way match. **B.** Configure a company matching policy of two-way matching and specify the vendors that require a three-way match. **C.** Configure a company matching policy of two-way matching and specify the items that require a three-way match. **D.** Configure a company matching policy of a three-way match. **E.** Configure a company matching policy of two-way matching and set the matching policy for specific item, and vendor combination level to three-way matching. **Answer: E** Explanation: References:

<https://docs.microsoft.com/en-us/dynamics365/unified-operations/financials/accounts-payable/tasks/set-up-accounts-payable-invoice-matching-validation>

NEW QUESTION: 2 Which three STP protection mechanisms are supported on MX Series, EX Series, and QFX Series devices? (Choose three.) **A.** loop protection **B.** access protection **C.** root protection **D.** trunk protection **E.** BPDU protection **Answer: A,C,E**

NEW QUESTION: 3 What command would be used to verify trusted DHCP ports? **A.** show ip arp trust **B.** show ip dhcp snooping **C.** show mls qos **D.** show ip trust **Answer: B** Explanation: Explanation/Reference: Explanation: The command show ip dhcp snooping is used to verify trusted DHCP ports. This command is used to verify which ports are intended to have DHCP servers connected to them. DHCP snooping creates an IP address to MAC address database that Dynamic ARP Inspection (DAI) uses to validate ARP packets. It compares the MAC address and IP address in ARP packets and only permits the traffic if the addresses match. This eliminates attackers that are spoofing MAC addresses. DHCP snooping is used to define ports as trusted for DHCP server connections. The purpose of DHCP snooping is to mitigate DHCP spoofing attacks. DHCP snooping can be used to determine what ports are able to send DHCP server packets, such as DHCP OFFER, DHCPACK, and DHCPNAK. DHCP snooping can also cache the MAC address to IP address mapping for clients receiving DHCP addresses from a valid DHCP server. MLS QOS has no bearing on DHCP services, so show mls qos is not correct. The other commands are incorrect because of invalid syntax. Objective: Infrastructure Security Sub-Objective: Configure and verify switch security features References: Cisco > Cisco IOS IP Addressing Services

Command Reference > DHCP Commands > show ip dhcpsnooping
