NEW QUESTION: 1What can be done to secure the virtual terminal interfaces on a router? (Choose two.)**A.** Administratively shut down the interface.**B.** Physically secure the interface.**C.** Enter an access list and apply it to the virtual terminal interfaces using the access-class command.**D.** Create an access list and apply it to the virtual terminal interfaces with the access-group command.**E.** Configure a virtual terminal password and login process.**Answer: C,E****Explanation:**Explanation/Reference:Explanation:It is a waste to administratively shut down the interface. Moreover, someone can still access the virtual terminal interfaces via other interfaces -> A is not correct. We can not physically secure a virtual interface because it is "virtual" -> B is not correct. To apply an access list to a virtual terminal interface we must use the "access-class" command. The "access-group" command is only used to apply an access list to a physical interface -> C is not correct; E is correct. The most simple way to secure the virtual terminal interface is to configure a username & password to prevent unauthorized login -> D is correct.

NEW QUESTION: 2You plan to use Azure Network Watcher to perform the following tasks:* Task1: Identify a security rule that prevents a network packet from reaching an Azure virtual machine* Task2: Validate outbound connectivity from an Azure virtual machine to an external host Which feature should you use for each task?
