If you have any question or request for further assistance about the PEGACPDC23V1 study braindumps, you can leave us a message on the web page or email us.

**NEW QUESTION: 1**A technician needs to limit the amount of broadcast traffic on a network and allow different segments to communicate with each other. Which of the following options would satisfy these requirements?**A.** Add a router and enable OSPF.**B.** Add a layer 3 switch and create a VLAN.**C.** Add a bridge between two switches.**D.** Add a firewall and implement proper ACL.**Answer: B****Explanation:**We can limit the amount of broadcast traffic on a switched network by dividing the computers into logical network segments called VLANs.A virtual local area network (VLAN) is a logical group of computers that appear to be on the same LAN even if they are on separate IP subnets. These logical subnets are configured in the network switches. Each VLAN is a broadcast domain meaning that only computers within the same VLAN will receive broadcast traffic.To allow different segments (VLAN) to communicate with each other, a router is required to establish a connection between the systems. We can use a network router to route between the VLANs or we can use a `Layer 3' switch. Unlike layer 2 switches that can only read the contents of the data-link layer protocol header in the packets they process, layer 3 switches can read the (IP) addresses in the network layer protocol header as well.

**NEW QUESTION: 2**You work as an Exchange Administrator for McRobert Inc. You are configuring a new Exchange 2000 Server computer and two storage groups, group A and group B, on your network. You have to configure the physical disks on the Exchange 2000 Server computer to provide better performance and availability.Which configuration will you use to achieve this?**A.** Mirrored ---- Transaction Log Files ( groups A and B)RAID5 ----- Information Store (groups A and B)**B.** Single drive ---- Transaction Log Files (group A)Single drive ---- Transaction Log Files (group B)RAID5 ----- Information Store (groups A and B)**C.** Single drive ---- Transaction Log Files (group A)Single drive ---- Transaction Log Files (group B)RAID5 ----- Information Store (group A)RAID5 ----- Information Store (group B)**D.** Mirrored ----

Transaction Log Files (group A)Mirrored ---- Transaction Log Files (group B)RAID5 -----  
Information store (groups A and B)**Answer: C**

**NEW QUESTION: 3**Which NAS implementation consolidates file-based and block-based access on a single storage platform?**A. UnifiedB. GatewayC. Scale-outD. IntegratedAnswer: A**
