PREPARING FOR THE C-C4H320-34 EXAM BUT GOT NOT MUCH TIME.

NEW QUESTION: 1 Microsoft ADO.NET を使用して、Microsoft SQL Server 2014 データベースから読み取る .NET アプリケーションをいくつか作成することを計画しています。アプリケーションの関連要件は、次の表に記載されています。

通常、アプリケーションは一度に数千行のデータを読み取ります。

各アプリケーションのデータを取得するために使用するオブジェクトを特定する必要があります。このソリューションでは、アプリケーションサーバーで使用されるメモリ量を最小限に抑える必要があります。何を識別しますか？ 回答するには、回答領域で適切なオプションを選択します。

Answer: Explanation: Explanation App1: DataReader App2: DataReader App3: DataAdapter Need to use a DataAdapter since the data could be modified. Note: You can use the ADO.NET DataReader to retrieve a read-only, forward-only stream of data from a database. Results are returned as the query executes, and are stored in the network buffer on the client until you request them using the Read method of the DataReader. Using the DataReader can increase application performance both by retrieving data as soon as it is available, and (by default) storing only one row at a time in memory, reducing system overhead. A DataAdapter is used to retrieve data from a data source and populate tables within a DataSet. The DataAdapter also resolves changes made to the DataSet back to the data source. The DataAdapter uses the Connection object of the .NET Framework data provider to connect to a data source, and it uses Command objects to retrieve data from and resolve changes to the data source.
