**NEW QUESTION:** 2A customer with multiple locations around the world is looking at IBM Spectrum Scale.What is the major benefit of IBM Spectrum Scale to this environment?**A.** It is a product with native CIFS support.**B.** It is a cloud-only offering.**C.** It offers Global Name Space.**D.** It provides enterprise grade encryption.**Answer: C**

**NEW QUESTION:** 3When logging on to a workstation, the log-on process should:**A.** Validate the log-on only after all input data has been supplied.**B.** Provide a Help mechanism that provides log-on assistance.**C.** Not provide information on the previous successful log-on and onprevious unsuccessful log-on attempts.**D.** Place no limits on the time allotted for log-on or on the number ofunsuccessful log-on attempts.**Answer: A**Explanation:This approach is necessary to ensure that all the information requiredfor a log-on has been submitted and to avoid providing informationthat would aid a cracker in trying to gain unauthorized access to theworkstation or network. If a log-on attempt fails, information as towchich part of the requested log-on information was incorrect shouldnot be supplied to the user.**Answer** "Provide a Help mechanism that provides log-on assistance" is incorrect since aHelp utilitywould provide help to a cracker trying to gain unauthorized access tothe network.For answer "Place no limits on the time allotted for log-on or on the number of unsuccessful log-on attempts", maximum and minimum time limits should be placed on the log-on process. Also, the log-on process should limitthe number of unsuccessful log-on attempts and temporarily suspendthe log-on capability if that number is exceeded. One approach is toprogressively increase the time interval allowed between unsuccessfullog-on attempts.**Answer** "Not provide information on the previous successful log-on and on previous unsuccessful log-on attempts" is incorrect since providing such information will alert an authorized user if someone has been attempting to gain unauthorized access to the network from the user's workstation.
