NEW QUESTION: 1Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You are developing a RESTful API that uses ASP.NET Core. You plan to host the API in Azure App Services. You provision a development environment in the application service. Developers must be able to deploy the API to the development environment. You must not share the Azure account credentials with developers. You need to ensure that developers can deploy the API to the development environment. Solution: Share the Publish profile for the application service with the developers. Use Web Matrix 2 for publishing. Does the solution meet the goal? **A. Yes B. No**
Answer: B Explanation: Explanation You should use a Publishing Profile with Microsoft Visual Studio Publishing as WebMatrix enables developers to build websites, while Visual Studio Publishing is used to develop computer programs for Microsoft Windows, as well as web sites, web applications and web services.
