What is the most efficient method to move the application and the VIP?
A. Run `crsctl relocate resource MyApp -n RACNODE4 -f`.
B. Run `crsctl stop resource MyApp -n RACNODE3 -f` followed by `crsctl start MyApp -n RACNODE4 -f`.
C. Run `crsctl stop resource MyApp -n RACNODE3 -f` followed by `crsctl relocate resource MyApp -n RACNODE4`.
D. Run `crsctl relocate resource MyApp -n RACNODE4`.
Answer: A
Explanation: Relocating Applications and Application Resources Use the `crsctl relocate resource` command to relocate applications and application resources. For example, to relocate the Apache Web server application to a server named `rac2`, run the following command: `# crsctl relocate resource myApache -n rac2` Each time that the action program is called, the `crsctl relocate resource` command waits for the duration specified by the value of the `SCRIPT_TIMEOUT` resource attribute to receive notification of success or failure from the action program. A relocation attempt fails if: The application has required resources that run on the initial server Applications that require the specified resource run on the initial server To relocate an application and its required resources, use the `-f` option with the `crsctl relocate resource` command. Oracle Clusterware relocates or starts all resources that are required by the application regardless of their state. Oracle® Clusterware Administration and Deployment Guide 11g Release 2 (11.2)
