NEW QUESTION: 1 Welcher Prozess darauf abzielt, genaue Fortschrittsinformationen für das Projekt bereitzustellen? **A.** Verwalten einer Bühnengrenze **B.** Produktlieferung verwalten **C.** Starten eines Projekts **D.** Ein Projekt leiten **Answer: B**

NEW QUESTION: 2 An IT security team is concerned about the authentication traffic patterns that may be required to integrate the private and public clouds. As a result, IT has elected to federate their active directory using ADFS from the private cloud to the public cloud. One of the design decisions is whether to use a Layer 2, 3, or 7 firewall / switch mechanism between the public and private clouds. There are trade-offs with each choice. Which network layer would best address this situation, and why? **A.** Layer 2, because it provides the best performance and it is easy to isolate problems. **B.** Layer 3, because it allows segment isolation while still providing high performance levels. **C.** Layer 7, because it allows control at the application layer and is policy driven. **D.** Layer 2, because it provides the simplest configuration to manage and it is easy to isolate and troubleshoot problems. **Answer: C**

NEW QUESTION: 3 You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 connects to your corporate network. The Corporate network uses the 10.10.0.0/16 address space. Server1 hosts a virtual machine named VM1, VM1 is configured to have an IP addresses of 172.16.1.54/16. You need to ensure that VM1 can access the resources on the corporate network. What should you do? To answer, select the appropriate options in the answer area. **Answer:** Explanation:

NEW QUESTION: 4 Your company deploys several Linux and Windows virtual machines (VMs) to Azure. The VMs are deployed with the Microsoft Dependency Agent and the Log Analytics Agent installed by using Azure VM extensions. On-premises connectivity has been enabled by using

Azure ExpressRoute. You need to design a solution to monitor the VMs. Which Azure monitoring services should you use? To answer, select the appropriate Azure monitoring services in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation

Box 1: Azure Traffic Analytics Traffic Analytics is a cloud-based solution that provides visibility into user and application activity in cloud networks. Traffic analytics analyzes Network Watcher network security group (NSG) flow logs to provide insights into traffic flow in your Azure cloud. With traffic analytics, you can:

- * Identify security threats to, and secure your network, with information such as open-ports, applications attempting internet access, and virtual machines (VM) connecting to rogue networks.
- * Visualize network activity across your Azure subscriptions and identify hot spots.
- * Understand traffic flow patterns across Azure regions and the internet to optimize your network deployment for performance and capacity.
- * Pinpoint network misconfigurations leading to failed connections in your network.

Box 2: Azure Service Map Service Map automatically discovers application components on Windows and Linux systems and maps the communication between services. With Service Map, you can view your servers in the way that you think of them: as interconnected systems that deliver critical services. Service Map shows connections between servers, processes, inbound and outbound connection latency, and ports across any TCP-connected architecture, with no configuration required other than the installation of an agent.
