And to help them adjust to the real exam, we also developed the Software version of the C1000-168 learning prep which can simulate the real exam, So it is urgent for you to choose a study appliance, especially for most people participating C1000-168 dumps actual test first time it is very necessary to choose a good training tool to help you.

We provide PDF version for all the question answers you [C-THR81-2211 Valid Study Plan](#) need to prepare for IBM Cloud Pak for Data v4.6 Administrator, God wants me to be a person who have strength, rather than a good-looking doll.

All Transactions are SSL secured.

NEW QUESTION: 1What is the least ideal Synchronization Status for Security Management Server High Availability deployment?**A.** Lagging**B.** Collision**C.** Never been synchronized**D.** Synchronized**Answer: A****Explanation:**Explanation/Reference:Explanation:The possible synchronization statuses are:Never been synchronized - immediately after the Secondary Security Management server has been installed, it has not yet undergone the first manual synchronization that brings it up to date with the Primary Security Management server. Synchronized - the peer is properly synchronized and has the same database information and installed Security Policy.Lagging - the peer SMS has not been synchronized properly.For instance, on account of the fact that the Active SMS has undergone changes since the previous synchronization (objects have been edited, or the Security Policy has been newly installed), the information on the Standby SMS is lagging.Advanced - the peer SMS is more up-to-date.For instance, in the above figure, if a system administrators logs into Security Management server B before it has been synchronized with the Security Management server A, the status of the Security Management server A is Advanced, since it contains more up-to-date information which the former does not have.In this case, manual synchronization must be initiated by the system administrator by changing the Active SMS to a Standby SMS. Perform a synch me operation from the more advanced server to the Standby SMS. Change the Standby SMS to the Active SMS.Collision - the Active SMS and its peer have different installed policies and databases. The administrator must perform manual synchronization and decide which of the SMSs to overwrite.Reference:
