**NEW QUESTION: 1** A My Reports report has been designed to return the assets associated with the user logged into the system. When the report is run by the user it returns all the assets in the database. The user has been assigned assets. The assets display correctly in the user's people record and the proper forward association from the perspective of the people Has Assets and the reverse association Is Asset Of has been created. What could be wrong with the report? **A.** The association filter is using the business object of triPeople as the filter's object. **B.** The association's filter property Reverse Association is set to Yes. **C.** The association filter is using the string Has Assets. **D.** The association filter is using the keyword \$\$RECORDID\$\$ for the record. **Answer: D**

**NEW QUESTION: 2** To what does "message repudiation" refer to what concept in the realm of email security? **A.** Message repudiation means a recipient can be sure that a message was sent from a certain host. **B.** Message repudiation means a user can claim damages for a mail message that damaged their reputation. **C.** Message repudiation means a user can validate which mail server or servers a message was passed through. **D.** Message repudiation means a sender can claim they did not actually send a particular message. **E.** Message repudiation means a recipient can be sure that a message was sent from a particular person. **Answer: D**  
Explanation: A quality that prevents a third party from being able to prove that a communication between two other parties ever took place. This is a desirable quality if you do not want your communications to be traceable. Non-repudiation is the opposite quality—a third party can prove that a communication between two other parties took place. Non-repudiation is desirable if you want to be able to trace your communications and prove that they occurred. Repudiation - Denial of message submission or delivery.

**NEW QUESTION: 3** Which three file types are stored in the Fast Recovery Area by default in a traditional nonOMF file system? (Choose three.) **A.** Flashback Data Archive files **B.** archived log files **C.** parameter file **D.** online redo log files **E.** Flashback logs **F.** multiplexed copies of the current control file **Answer: B,D,E**
