NEW QUESTION: 1 Drag and drop the statements about NAT64 from the left onto the correct NAT64 types on the right. **Answer:** Explanation:

NEW QUESTION: 2 The cloud service owner of Cloud Service A is evaluating Clouds X, Y and Z to determine which cloud environment can offer the greatest level of reliability. All three clouds are geographically dispersed across three separate time zones. As a result, each cloud experiences usage peaks at different times. Based on the metrics provided, the greater the usage of a cloud, the lower its reliability. When the cloud service owner complains to Cloud Provider A (the owner of all three clouds) that none of the clouds provide an adequate level of reliability, Cloud Provider A suggests a solution that increases resiliency. Which of the following statements accurately describe how a cloud balancing solution can be implemented to fulfill the resiliency requirements of Cloud Service A? **A.** A type of automated scaling listener that can also be considered a cloud monitor is implemented in Clouds X, Y and Z to establish a system whereby each cloud can assume control of cloud service consumer message exchanges. This results in resilient cloud balancing, as opposed to on-demand cloud balancing. **B.** Clouds X, Y and Z are equipped with failover system mechanisms and specialized types of automated scaling listener mechanisms in order to establish cross-cloud resiliency. Cloud Service A is configured so that Clouds X, Y and Z can dynamically generate redundant instances on-demand. **C.** Cloud Service A is redundantly deployed in advance within Clouds X, Y and Z and is further supplemented with failover system mechanisms and specialized types of automated scaling listener mechanisms. **D.** Using a PaaS environment, the cloud service owner can configure a primary Cloud Service A implementation on Cloud X so that when failure conditions occur, message requests from cloud service consumers are automatically routed to a redundant on-premise implementation of Cloud Service A. This requires the implementation of the failover system and resource replication mechanisms. **Answer: B,C**

NEW QUESTION: 3 Given that version.txt is accessible and contains: 1234567890 and given the code fragment: What is the result? **A. 0 B. 1 C. 2 D.** The program prints nothing. **Answer: A**
