And you can prepare for your Salesforce-Loyalty-Management exam with under the guidance of our training materials anywhere at any time.

NEW QUESTION: 1 Which of the following is the concept of segregating information or processes, within the same system or application, for security reasons? **A.** Sandboxing **B.** Cell blocking **C.** Fencing **D.** Pooling **Answer: A** **Explanation:** Sandboxing involves the segregation and isolation of information or processes from other information or processes within the same system or application, typically for security concerns. Sandboxing is generally used for data isolation (for example, keeping different communities and populations of users isolated from others with similar data). In IT terminology, pooling typically means bringing together and consolidating resources or services, not segregating or separating them. Cell blocking and fencing are both erroneous terms.

NEW QUESTION: 2 注：この質問は同じシナリオを提示する一連の質問の一部です。連載の各質問には、記載されている目標を達成できる可能性のある固有の解決策が含まれています。

他の人が正しい解決策を持っていないかもしれない間、いくつかの質問セットは複数の正しい解決策を持つかもしれません。このセクションで質問に答えた後は、それに戻ることはできません。その結果、これらの質問はレビュー画面に表示されません。

複数のAzure仮想マシンを展開する予定です。

単一のデータセンターで障害が発生した場合に、仮想マシンで実行されているサービスが利用可能であることを確認する必要があります。

解決策：仮想マシンを複数のスケールセットに展開します。これは目標を達成していますか？ **A.** Yes **B.** No **Answer: B** **Explanation:** Azure virtual machine scale sets let you create and manage a group of load balanced VMs. The number of VM instances can automatically increase or decrease in response to demand or a defined schedule. Scale sets provide high availability to your applications, and allow you to centrally manage, configure, and update many VMs. Virtual machines in a scale set can be deployed across multiple update domains and fault domains to maximize availability and resilience to outages due to data center outages, and planned or

unplanned maintenance events.

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/availability>

NEW QUESTION: 3 Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time. When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task. Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided. Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab. Username and password Use the following login credentials as needed: To enter your username, place your cursor in the Sign in box and click on the username below. To enter your password, place your cursor in the Enter password box and click on the password below. Microsoft 365 Username: admin@[email#160;protected] Microsoft 365 Password: &=Q8v@2qGzYz If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab. The following information is for technical support only: Lab instance: 11032396 You need to ensure that [email#160;protected] receives an alert when a user establishes a sync relationship to a document library from a computer that is a member of an Active Directory (AD) domain. To complete this task, sign in to the Microsoft Office 365 admin center. **Answer:** Explanation: See explanation below. Explanation 1. Navigate to Manage Alerts in the Security & Compliance Center. 2. On the Activity alerts page, click The flyout page to create an activity alert is displayed. 3. Complete the following fields to create an activity alert: a. Name - Type a name for the alert. Alert names must be unique within your organization. b. Description (Optional) - Describe the alert, such as the activities and users being tracked, and the users that email notifications are sent to. Descriptions provide a quick and easy way to describe the purpose of the alert to other admins. c. Alert type - Make sure the Custom option is selected. d. Send this alert when - Click Send this alert when and then configure these two fields: * Activities - Click the drop-down list to display the activities that you can create an alert for. This is the same activities list that's displayed when you search the Office 365 audit log. You can select one or more specific activities or you can click the activity group name to select all activities in the group. For * a description of these activities, see the "Audited activities" section in Search the audit log. When a user performs any of the activities that you've added to the alert, an email notification is sent. * Users - Click this box and then select one or more users. If the users in this box perform the activities that you added to the Activities box, an alert will be sent. Leave the Users box blank to send an alert when any user in your organization performs the activities specified by the alert. e. Send this alert to - Click Send this alert, and then click in the Recipients box and type a name to add a user's who will receive an email notification when a user (specified in the Users box) performs an activity (specified in the Activities box). Note that you are added to the list of recipients by default. You can remove your name from this list. 4. Click Save to create the alert. The new alert is displayed in the list on the The status of the alert is set to On. Note that the recipients who will receive an email notification when an alert is sent are also listed. Reference:

NEW QUESTION: 4 Your network contains an Active Directory domain named adatim.com. The domain contains four member servers that run Windows Server 2016. On each server, you locally

attach three disks and install the Failover Clustering feature. You need to create a volume that uses all the disks. The volume must be highly available. Which three cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order. **Answer:** Explanation: Explanation
