Get Desirable Result in XSIAM-Analyst Exam Dumps, They are the versions of PDF, Software and APP online, How Can XSIAM-Analyst Dumps Make My Exam Preparation Easy?

NEW QUESTION: 1 Which two VoIP protocols use SDP to describe streaming media sessions? (Choose two.)
A. RAS B. SCCP C. cRTP D. H.323 E. SIP F. MGCP
Answer: E, F
Explanation:
Explanation The Session Description Protocol (SDP), defined in RFC 2327, describes the content of sessions, including telephony, Internet radio, and multimedia applications. SDP includes information about [8]:
Media streams: A session can include multiple streams of differing content. SDP currently defines audio, video, data, control, and application as stream types, similar to the MIME types used for Internet mail.
Addresses: SDP indicates the destination addresses, which may be a multicast address, for a media stream.
Ports: For each stream, the UDP port numbers for sending and receiving are specified.
Payload types: For each media stream type in use (for example, telephony), the payload type indicates the media formats that can be used during the session.
Start and stop times: These apply to broadcast sessions, for example, a television or radio program. The start, stop, and repeat times of the session are indicated.
Originator: For broadcast sessions, the originator is specified, with contact information. This may be useful if a receiver encounters technical difficulties.

NEW QUESTION: 2 You create a table that has the StudentCode, SubjectCode, and Marks columns to record mid-year marks for students. The table has marks obtained by 50 students for various subjects. You need to ensure that the following requirements are met:
* Students must be ranked based on their average marks.
* If one or more students have the same average, incremental ranks must be given based on the order they are created.
* Ranks must be sequential without gaps in between.
Which Transact-SQL query should you use?
A. Option C B. Option H C. Option A D. Option B E. Option G F. Option B G. Option E
Answer: A
Explanation: The ROW_NUMBER numbers the output of a result set. More specifically, returns the sequential number of a row within a partition of a result set, starting at 1 for the first row in each partition.
