A. They are used to rate limit traffic destined to targeted networks.
B. They support standard ACLs only.
C. They support standard and extended ACLs.
D. They are used to filter usernames and passwords for Telnet and SSH.
E. They are used to filter Layer 7 traffic.
Answer: C
Explanation: Named Access Control Lists (ACLs) allows standard and extended ACLs to be given names instead of numbers. Unlike in numbered Access Control Lists (ACLs), we can edit Named Access Control Lists. Another benefit of using named access configuration mode is that you can add new statements to the access list, and insert them wherever you like. With the legacy syntax, you must delete the entire access list before reapplying it using the updated rules.
