**NEW QUESTION: 1** Which of the following is NOT possible with a Transformer Stage?  
**A.** Use system variables and job parameters within derivations  
**B.** Create and compile a custom function to be used in output link derivations  
**C.** Define variables that can be referenced only within the Transformer Stage  
**D.** Generate multiple output records for each single record

**Answer: B**

**NEW QUESTION: 2** An internal auditing team would like to strengthen the password policy to support special characters. Which of the following types of password controls would achieve this goal?  
**A.** Increase password length  
**B.** Password complexity  
**C.** Add reverse encryption  
**D.** Allow single sign on  
**Answer: B**  
**Explanation:** Generally, the minimum password length is considered to be 8 upper and lowercase characters. The use of at least one non-alpha character like punctuation, special characters, or numbers, combined with the password length produces strong passwords. Strong passwords are produced by the combination of a password's length and complexity.  
**Incorrect Answers:**  
**A.** Typical protocol components, like encryption and hash functions, can be reverse-engineered automatically by tracing the execution of protocol implementations and trying to identify buffers in memory holding unencrypted packets. It will not strengthen the password policy to support special characters.  
**C.** Increasing the password length will not necessarily support special characters.  
**D.** Single sign-on means that once a user (or other subject) is authenticated into a realm, they need not re-authenticate to access resources on any realm entity. It will not strengthen the password policy to support special characters.

**NEW QUESTION: 3** Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2012 R2. Server1 has the IP Address Management (IPAM) Server feature installed. Server2 has the DHCP Server server role installed. A user named User1 is a member of the IPAM Users group on Server1. You need to ensure that User1 can use IPAM to modify the DHCP scopes on Server2. The solution must minimize the number of permissions assigned to User1. To which group should

you add User1? **A.** IPAM MSM Administrators on Server1 **B.** DHCP Administrators on Server2 **C.** IPAM ASM Administrators on Server1 **D.** IPAMUG in Active Directory **Answer: B** Explanation: The user need rights to change DHCP not IPAMC. Members of the DHCP Administrators group can view and modify any data at the DHCP server.
