There are a lot of experts and professors in or company in the field, Our C_TFG61_2405 exam engine will help you solve all the problems.

NEW QUESTION: 1 A firewall filters packets exchanged between zones but does not filter packets exchanged between interfaces in the same zone.**A. False B. True****Answer: B**

NEW QUESTION: 2 You are the administrator for a SharePoint 2016 farm. You configure a connection to the SharePoint Store. Users report that they cannot select or install specific apps from the SharePoint Store. Users can install other apps. You need to allow users to purchase and install any type of apps from the SharePoint Store. What should you do?**A. Delete the existing App Catalog. Then, delete and provision the Subscription Setting and App Management service applications. B. Configure the Store settings to allow users to purchase apps. C. Deploy an App Catalog. D. Activate the Internet-facing endpoints feature for apps.****Answer: D**

NEW QUESTION: 3 A company has Windows 10 Enterprise client computers. Client computers are connected to a corporate private network. You deploy a Remote Desktop Gateway, DirectAccess, and a VPN server at the corporate main office. Users are currently unable to connect from their home computers to their work computers by using Remote Desktop. You need to ensure that users can remotely connect to their office computers by using Remote Desktop. Users must not be able to access any other corporate network resource by using the local Windows installation from their home computers. Which setting should you configure on the home computers?**A. Remote Desktop Gateway IP address B. Virtual Private Network connection C. Remote Desktop local resources D. DirectAccess connection****Answer: A**
Explanation: Explanation/Reference: Explanation: The solution is to deploy Remote Desktop Gateway in the office. Remote users can then connect to their computers on the office network by using Remote Desktop client on their home computers configured with the IP address of the Remote Desktop Gateway. Remote Desktop Gateway (RD Gateway) is a role service that enables authorized remote users to connect to resources on an internal corporate or private network, from any Internet-connected device that can run the Remote Desktop Connection (RDC) client. The network resources can be Remote Desktop Session Host (RD Session Host) servers, RD Session Host servers running RemoteApp programs, or computers with Remote Desktop enabled. RD Gateway uses the Remote Desktop Protocol (RDP) over HTTPS to establish a secure, encrypted connection between remote users on the Internet and the internal network resources on which their productivity applications run. RD Gateway provides a

comprehensive security configuration model that enables you to control access to specific internal network resources. RD Gateway provides a point-to-point RDP connection, rather than allowing remote users access to all internal network resources. Incorrect Answers: B: Remote Desktop local resources determine which local resources (printers, drives etc.) are available in a Remote Desktop connection. However, this solution makes no provision for actually connecting to the office network. C: Virtual Private Network connections would enable remote access to the office network but this solution would not prevent users accessing other corporate network resources. D: DirectAccess connections would enable remote access to the office network but this solution would not prevent users accessing other corporate network resources.
