NEW QUESTION: 1The purpose of a mainframe audit is to provide assurance that (choose all that apply):**A.** security is strong**B.** processes are being implemented as required**C.** None of the choices.**D.** procedures in place are updated as needed**E.** the mainframe is operating as it should**F.** the OS applications are secured**G.** procedures in place are working**Answer: A,B,D,E,G**
Explanation:Explanation/Reference:Explanation:The purpose of a mainframe audit is to provide assurance that processes are being implemented as required, the mainframe is operating as it should, security is strong, and that procedures in place are working and are updated as needed. The auditor may accordingly make recommendations for improvement.

NEW QUESTION: 2Errors occasionally occur when saving data using the FlightInfoContext ADO.NET Entity Framework context. Updates to the data are being lost when an error occurs. You need to ensure that data is still saved when an error occurs by retrying the operation. No more than five retries should be performed. With which code segment should you replace the body of the SaveChanges() method in the FlightInfoContext.es file?**A.** Option B**B.** Option D**C.** Option C**D.** Option A**Answer: C**
Explanation:Explanation/Reference:EntitySqlException: Represents errors that occur when parsing Entity SQL command text. This exception is thrown when syntactic or semantic rules are violated. SqlException: The exception that is thrown when SQL Server returns a warning or error. This class cannot be inherited.
EntityCommandExecutionException : Represents errors that occur when the underlying storage provider could not execute the specified command. This exception usually wraps a provider-specific exception.
Topic 2, ASP.NET MVC Background You are developing an ASP.NET MVC application in Visual Studio 2012 that will be used to process orders. Business Requirements The application contains the following three pages: - A page that queries an external database for orders that are ready to be processed. The user can then process the order. - A page to view processed orders. - A page to view vendor information. The application consumes three WCF services to retrieve external data. Technical Requirements Visual Studio Solution: The solution contains the following four projects. - ExternalQueue: A WCF service project used to communicate with the external order database. - OrderProcessor: An ASP.NET MVC project used for order processing and logging order metadata. - OrderUpload: A WCF service project used to submit order data to an external data source. - Shipping: A WCF service project used to acquire shipping information. ExternalQueue Project: Entity Framework is used for data access. The entities are defined in the ExternalOrders.edmx file as shown in the following diagram. The project contains two services defined in the following files. - IExternalQueueService.es - ExternalQueueService.svc. The ExternalQueue.Helpers namespace contains a definition for a class named OrderNotFound Exception. OrderProcessor Project: Entity Framework is used for data access. The entities are defined in the ProcessedOrders.edmx file as shown in the following diagram. The classes are contained in the OrderProcessor.Entities namespace. The project contains the following two controllers. --InboundQueueController.es

ProcessedOrderController.esWCF service proxies to the ExternalQueue, Shipping and OrderUpload services have been generated by using the command prompt. The ExecuteCommandProcedure() method in the ExternalQueueService.svc file must run asynchronously. The ProcessedOrderController controller has the following requirements. The GetVendorPolicy() method must enforce a 10 minute absolute cache expiration policy. The GetProcessedOrders() method must return a view of the 10 most recently processed orders. OrderUpload Project: The project contains two services defined in the following files:-- IUploadCallbackService.esUploadCallbackService.svc Data Access is maintained in a file named UploadOrder.es. Shipping Project: Entity Framework is used for data access. The entities are defined in the ExternalOrders.edmx file as shown in the following diagram. The Custom Tool property for ExternalOrders.edmx has been removed. POCO classes for the Entity Model are located in the ShippingAddress.es file. The POCO entity must be loaded by using lazy loading. The project contains two services defined in the following files.-- IShippingService.es ShippingService.svc. The IShippingService contract must contain an operation that receives an order number as a parameter. The operation must return a class named ShippingInfo that inherits from a class named State. Application Structure

NEW QUESTION: 3 Which cloud deployment solution is used for Azure virtual machines and Azure SQL databases? To answer, select the appropriate options in the answer area. Hot Area:

Answer: Explanation:
