Once our professional experts have developed the newest test study material, the system will automatically send you an email which includes the installation package of the CWDP-304 practice material.

NEW QUESTION: 1 Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series. You maintain a Microsoft SQL Server instance that contains the following databases SalesDb1, SalesDb2, and SalesDb3. Each database has tables named Products and Sales. The following table shows the configuration of each database. The backup strategies for each database are described in the following table. Each full or differential backup operation writes into a new file and uses a different sequence number. You observe the following database corruption issues. SalesDb3 reports a number of database corruption issues related to error 823 and 824 when reading data pages. You must display the following information about the corrupted pages: * database name * impacted file id * impacted file physical name * impacted page id * event type that identifies the error type * error count Users report performance issues when they run queries against SalesDb2. You plan to monitor query statistics and execution plans for SalesDb2 by using Query Store. The monitoring strategy must meet the following requirements: * Perform automatic data cleanup when query store disk usage reaches 500 megabyte (MB). * Capture queries based on resource consumption. * Use a stale query threshold value of 60 days. The query optimizer generates suboptimal execution plans for a number of queries on the Sales table in SalesDb2. You will create a maintenance plan that updates statistics for the table. The plan should only update statistics that were automatically created and have not been updated for 30 days. The update should be based on all data in the table. You need to write the query the maintenance plan will use to update the statistics. Which four Transact-SQL segments should you use to develop the solution? To answer, move the appropriate Transact-SQL segments from the list of Transact-SQL segments to the answer area and arrange them in the correct order. **Answer:** Explanation: Explanation Step 1: Use SalesDB2... We specify the specific database SalesDB2, not the master. Step 2: Step 3: From scenario: The plan should only update statistics that were automatically created and have not been updated for 30 days. Step 4: Declare the cursor using WITH FULLSCAN. References: <https://solutioncenter.apexsql.com/how-to-automate-and-schedule-sql-server-index-defragmentation/>

NEW QUESTION: 2

ファイバーチャネル SAN ファブリックでストレージ HBA ポートを識別するために何が使用されますか? **A. SCSI ID B. WWN C. MAC Address D. ION** **Answer: B**

NEW QUESTION: 3A customer is running an internal cloud and would like to have the ability to activate and deactivate processor cores on their E880 for peak processing periods throughout the year and to help control cost.Which feature is required?**A.** Capacity Upgrade on Demand**B.** Elastic Capacity on Demand**C.** Enterprise Capacity Pools**D.** Mobile Capacity on Demand

Answer: BExplanation:
