Answer: D
Explanation: Explanation/Reference: jQuery provides a way to trigger the event handlers bound to an element without any user interaction via the .trigger() method. jQuery's event handling system is a layer on top of native browser events. When an event handler is added using .on("click", function() {...}), it can be triggered using jQuery's .trigger("click") because jQuery stores a reference to that handler when it is originally added. Additionally, it will trigger the JavaScript inside the onclick attribute. Reference: Triggering Event Handlers
