NEW QUESTION: 2Joe, a security analyst, asks each employee of an organization to sign a statement saying that they understand how their activities may be monitored. Which of the following BEST describes this statement? (Select TWO).**A.** Acceptable use policy**B.** Security policy**C.** Email policy**D.** Risk acceptance policy**E.** Privacy policy**Answer: A,E****Explanation:**Privacy policies define what controls are required to implement and maintain the sanctity of data privacy in the work environment. Privacy policy is a legal document that outlines how data collected is secured. It should encompass information regarding the information the company collects, privacy choices you have based on your account, potential information sharing of your data with other parties, security measures in place, and enforcement.Acceptable use policies (AUPs) describe how the employees in an organization can use company systems and resources, both software and hardware.

NEW QUESTION: 3Which of the following solutions provides the most flexibility when testing new security controls prior to implementation?**A.** Virtualization**B.** Host software baselining**C.** Trusted OSD. OS hardening**Answer: A****Explanation:**Virtualization is used to host one or more operating systems in the memory of a single host computer and allows multiple operating systems to run simultaneously on the same hardware. Virtualization offers the flexibility of quickly and easily making backups of entire virtual systems, and quickly recovering the virtual system when errors occur.Furthermore, malicious code compromises of virtual systems rarely affect the host system, which allows for safer testing and experimentation.Incorrect Answers:A. Trusted OS is an access-control feature that limits resource access to client systems that run

operating system that are known to implement specific security features. B. Application baseline defines the level or standard of security that will be implemented and maintained for the application. It may include requirements of hardware components, operating system versions, patch levels, installed applications and their configurations, and available ports and services. Systems can be compared to the baseline to ensure that the required level of security is being maintained. C. Hardening is the process of securing a system by reducing its surface of vulnerability. Reducing the surface of vulnerability typically includes removing or disabling unnecessary functions and features, removing or disabling unnecessary user accounts, disabling unnecessary protocols and ports, and disabling unnecessary services.
