NEW QUESTION: 1To follow the Layer 2 switching guidelines, a network engineer decides to create a separate spanning tree for every group of 10 VLANs. Which version of spanning tree is appropriate to meet the company policy?**A. MSTB. RPVST+C. STPD. RSTPE. PVST+Answer: A**

NEW QUESTION: 2Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a server named Server1 that runs Windows Server 2016. You plan to use Windows Server Backup to back up all of the data on Server1. You create a new volume on Server1. You need to ensure that the new volume can be used as a backup target. The backup target must support incremental backups. Solution: You assign a drive letter to the volume, and you format the volume by using ReFS. Does this meet the goal?**A. NoB. YesAnswer: A**

NEW QUESTION: 3Which of the following process consist of identification and selection of data from the imaged data set in computer forensics?**A. ReportingB. ExtractionC. InterrogationD. InvestigationAnswer: B**Explanation:Explanation/Reference:Extraction is the process of identification and selection of data from the imaged data set. This process should include standards of quality, integrity and reliability. The extraction process includes software used and media where an image was made. The extraction process could include different sources such as system logs, firewall logs, audit trails and network management information. For CISA exam you should know below mentioned key elements of computer forensics during audit planning. Data Protection - To prevent sought-after information from being altered, all measures must be in place. It is important to establish specific protocol to inform appropriate parties that electronic evidence will be sought and not destroy it by any means. Data Acquisition - All information and data required should transferred into a controlled location; this includes all types of electronic media such as fixed disk drives and removable media. Each device must be checked to ensure that it is write protected. This may be achieved by using device known as write blocker. Imaging - The Imaging is a process that allows one to obtain bit-for bit copy of a data to avoid damage of original data or information when multiple analyses may be performed. The imaging process is made to obtain residual data, such as deleted files, fragments of deleted files and other information present, from the disk for analysis. This is possible because imaging duplicates the disk surface, sector by sector. Extraction - This process consist of identification and selection of data from the imaged data set. This process should include standards of quality, integrity and reliability. The extraction

process includes software used and media where an image was made. The extraction process could include different sources such as system logs, firewall logs, audit trails and network management information. Interrogation - Integration is used to obtain prior indicators or relationships, including telephone numbers, IP addresses, and names of individuals from extracted data. Investigation/ Normalization - This process converts the information extracted to a format that can be understood by investigator. It includes conversion of hexadecimal or binary data into readable characters or a format suitable for data analysis tool. Reporting- The information obtained from computer forensic has limited value when it is not collected and reported in proper way. When an IS auditor writes report, he/she must include why the system was reviewed, how the computer data were reviewed and what conclusion were made from analysis. The report should achieve the following goals Accurately describes the details of an incident. Be understandable to decision makers. Be able to withstand a barrage of legal security. Be unambiguous and not open to misinterpretation. Be easily referenced. Contains all information required to explain conclusions reached. Offer valid conclusions, opinions or recommendations when needed. Be created in timely manner. The following were incorrect answers: Investigation/ Normalization - This process converts the information extracted to a format that can be understood by investigator. It includes conversion of hexadecimal or binary data into readable characters or a format suitable for data analysis tool. Interrogation - Integration is used to obtain prior indicators or relationships, including telephone numbers, IP addresses, and names of individuals from extracted data. Reporting - The information obtained from computer forensic has limited value when it is not collected and reported in proper way. When an IS auditor writes report, he/she must include why the system was reviewed, how the computer data were reviewed and what conclusion were made from analysis. Following reference(s) were/was used to create this question: CISA review manual 2014 Page number 367 and 368
