We've only done one thing in more than ten years, [UiPath-ADPv1 Exam Sample](#) that is to provide more professional and precise exam material for our candidates.

NEW QUESTION: 1 Refer to the exhibit. At the end of an RSTP election process, which access layer switch port will assume the discarding role? **A.** Switch3, port Gi0/2 **B.** Switch3, port fa0/1 **C.** Switch3, port fa0/12 **D.** Switch4, port fa0/2 **E.** Switch4, port fa0/11 **F.** Switch3, port Gi0/1 **Answer: E**

NEW QUESTION: 2 A security analyst, Ann, is reviewing an IRC channel and notices that a malicious exploit has been created for a frequently used application. She notifies the software vendor and asks them for remediation steps, but is alarmed to find that no patches are available to mitigate this vulnerability. Which of the following BEST describes this exploit? **A.** Client-side attack **B.** Malicious add-on **C.** Malicious insider threat **D.** Zero-day **Answer: D**
Explanation: A zero day vulnerability refers to a hole in software that is unknown to the vendor. This security hole is then exploited by hackers before the vendor becomes aware and hurries to fix it—this exploit is called a zero day attack. Uses of zero day attacks can include infiltrating malware, spyware or allowing unwanted access to user information. The term "zero day" refers to the unknown nature of the hole to those outside of the hackers, specifically, the developers. Once the vulnerability becomes known, a race begins for the developer, who must protect users. In this question, there are no patches available to mitigate the vulnerability. This is therefore a zero-day vulnerability.

NEW QUESTION: 3 You have built a web application that you license to small businesses. The webapp uses a context parameter, called licenseExtension, which enables certain advanced features based on your client's license package. When a client pays for a specific service, you provide them with a license extension key that they insert into the <context-param> of the deployment descriptor. Not every client will have this context parameter so you need to create a context listener to set up a default value in the licenseExtension parameter. Which code snippet will accomplish this goal? **A.** You cannot do this because context parameters CANNOT be altered programmatically. **B.** `String ext = context.getInitParameter('licenseExtension');` `if (ext == null) { context.setInitParameter('licenseExtension', DEFAULT); }` **C.** `String ext = context.getAttribute('licenseExtension');` `if (ext == null) { context.setAttribute('licenseExtension', DEFAULT); }` **D.** `String ext = context.getInitParameter('licenseExtension');` `if (ext == null) { context.resetInitParameter('licenseExtension', DEFAULT); }` **E.** `String ext =`

```
context.getParameter('licenseExtension');if ( ext == null ) {  
context.setParameter('licenseExtension', DEFAULT);}Answer: A
```
