NEW QUESTION: 1Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.
Start of repeated scenario
Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10. The domain contains nine servers that are configured as shown in the following table. The virtual machines are configured as follows:
* Each virtual machine has one virtual network adapter.
* VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
* All of the servers on the network can communicate with all of the virtual machines.
End of repeated scenario
You create a new NLB cluster that contains VM3. You need to ensure that VM2 can remain in the original cluster and be added to the new cluster. What should you do first?
A. Add a new virtual network adapter to VM2.
B. Change the cluster operation mode.
C. Modify the default port rule.
D. Install the Web Application Proxy server role on VM2 and VM3.
Answer: A

NEW QUESTION: 2Consider the following computer applications:
(a) At a catalog sales firm, as phone orders are entered into their computer, both inventory and credit are immediately checked.
(b) A manufacturer's computer sends the coming week's production schedule and

parts orders to a supplier's computer. Which statement below is true for these applications?**A.** Both applications are examples of electronic data interchange EDI**B.** The first application is an example of OLRT and the second an example of EDI**C.** Both applications are examples of online real-time processing OLRT**D.** The first application is an example of EDI and the second an example of OLRT**Answer: B****Explanation:**The catalog sales firm is using an online processing system known as an online, real-time system (OLRT). OLRT systems handle transactions as they are entered, processing the input and providing output soon enough to affect a current decision making process, e.g., inventory and credit status of phone call orders. The sending of upcoming production schedules and parts orders by and manufacturer's computer to a supplier's computer is an example of electronic data interchange (EDI). EDI is the communication of electronic documents directly from one entity's computer to another's computer.
