NEW QUESTION: 1Your network contains an Active Directory domain named contoso.com. All users have client computers that run Windows 8.1.All computer accounts reside in an organizational unit (OU) named OU1. All of the computer accounts for the marketing department are members of a group named Marketing. All of the computer accounts for the human resources department are members of a group named HR Computers.You create a Group Policy object (GPO) named GPO1. You link GPO1 to OU1. You configure the Group Policy preferences of GPO1 to add two shortcuts named Link1 and Link2 to the desktop.You need to ensure that Link1 only appears on the desktop of client computers that have more than80 GB of free disk space and that Link2 only appears on the desktop of client computers that have less than 80 GB of free disk space.What should you configure?**A.** WMI Filtering**B.** Security Filtering**C.** Group Policy Inheritance**D.** Item-level targeting**Answer: D**Explanation:References: [https://technet.microsoft.com/en-us/library/dn789189\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/dn789189(v=ws.11).aspx)

NEW QUESTION: 2The three metadata layers are an important concept of the BI Server. Which statement is incorrect?**A.** The presentation layer defines the relationship that is needed to create the DML.**B.** The physical layer defines the objects and relationships that the Oracle BI Server needs to write native queries against each physical data source.**C.** Separating the logical of the application from the physical model provides the ability to federate multiple physical sources to the same logical object.**D.** The model and mapping layer define the business or logical model of the data. This layer determines the analytic behavior seen by users.**Answer: A** Explanation:Explanation/Reference:The relationship is defined at the model and mapping layer.Note:At the highest level, an OBIEE Metadata Repository includes three layers of information:1. First, a Physical layer is defined. The metadata layer identifies the source data. 2.Second, a Business Model and Mapping layer is defined. This metadata layer organizes the physical layer into logical categories and records the appropriate metadata for access to the source data.3.Finally, the Presentation layer is defined. This metadata layer exposes the business model entities for end-user access.

NEW QUESTION: 3When you deploy the Physical Host SolutionPack, what needs to be considered about the way it will leverage the Generic-RSC collector-manager?**A.** A collector-manager installed on a Windows Collector host can only collect data on other Windows hosts**B.** The collector-manager can use either port 5985 or 5986 to access the Linux and Windows hosts**C.** The collector-manager can collect data on both Windows and Linux hosts and requires scripts to be installed on the Collector Host**D.** The collector-manager is agentless and does not require scripts**Answer: C**
