**NEW QUESTION: 1**You are configuring a development environment for your team. You deploy the latest Visual Studio image from the Azure Marketplace to your Azure subscription. The development environment requires several software development kits (SDKs) and third-party components to support application development across the organization. You install and customize the deployed virtual machine (VM) for your development team. The customized VM must be saved to allow provisioning of a new team member development environment. You need to save the customized VM for future provisioning. Which tools or services should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: References: <https://docs.microsoft.com/en-us/azure/virtual-machines/windows/capture-image-resource#create-an-image-of-a-vm-using-powershell>

**NEW QUESTION: 2**Using public keys for identity management helps blockchain technology achieve which of the following? **A.** Trustlessness **B.** Decentralization **C.** Immutability **D.** Anonymity **Answer: D**

**NEW QUESTION: 3**You have an Azure SQL database. The database contains a table that uses a columnstore index and is accessed infrequently. You enable columnstore archival compression.

What are two possible results of the configuration? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point. **A.** Queries that use the index will consume more disk I/O. **B.** Queries that use the index will consume more CPU resources. **C.** The index will consume more memory. **D.** The index will consume more disk space. **E.** Queries that use the index will retrieve fewer data pages. **Answer: B, E** Explanation: For rowstore tables and indexes, use the data compression feature to help reduce the size of the database. In addition to saving space, data compression can help improve performance of I/O intensive workloads because the data is stored in fewer pages and queries need to read fewer pages from disk. Use columnstore archival compression to further reduce the data size for situations when you can afford extra time and CPU resources to store and retrieve the data.
