Explanation:By default, the reference bandwidth used in Cisco routers is 100Mbps, no

FastEthernet and above will have a cost of 1,no a gigabit interface and 10GE interface will be

equal with a fastethernet. This is not ideal. If we change the referencebandwidth to 100000

then the faster link will be used. Changing the reference bandwidth needn to be done on all

routers in the OSPF network.Increasing the cost on the R1-R3 link will also cause the traffic to

take the more direct route.
