Efficient Heroku-Architect: Salesforce Certified Heroku Architect

About our Salesforce Heroku-Architect exam pdf, Access a free demo today and discover why Heroku-Architect Salesforce certification professionals trust our products year after year.

Nowadays, Salesforce Certified Heroku Architect exam certification has been **Valid Heroku-Architect Mock Exam** a popular certification during IT industry, Immediate download for best questions after payment, We are confident that our high-quality Heroku-Architect study guide questions and our sincere services will leave you a deep impression.

We are proud to say that always imitated, never been transcended, Yes Estruturit Question and Answers Product is enough to pass the Exam, There are comprehensive content in the Heroku-Architect simulate test which can ensure you 100% pass.

Besides, achieving the Heroku-Architect certification is one way to show your personal ability, so the high level job position along with desirable salary will come true.

The Heroku-Architect exam questions that Estruturit provide with you is compiled by professionals elaborately and boosts varied versions: PDF version, Soft version and APP version, which aimed to help you pass the Heroku-Architect exam by the method which is convenient for you.

We assist you to prepare for almost all the main **Valid Heroku-Architect Mock Exam** certifications which are regarded valuable the Salesforce Architect sector, Besides, the free demo also has three versions, the pdf can be downloaded, **Valid Heroku-Architect Mock Exam** while the Soft & online engine are shown as the screenshot, which is allow to scan.

The key to a stress free learning **Valid Heroku-Architect Mock Exam** experience is to manage your time and plan ahead.

NEW QUESTION: 1A customer wants to generate different absence quotas for union employees in different personnel areas using report RPTQTA00 (Generate Absence Quotas).Which steps must be completed to meet this requirement?Please choose the correct answer.Response:**A.** Configure Quota Overview (PT50) and configure table T559L (Quota Configuration - Selection Rules).**B.** Configure table T559L (Quota Configuration - Selection Rules) and configure feature QUOMO (Determination of Quota Type Selection Rule Group).**C.** Configure schema TQTA (Generate Absence Quotas) and run program RPTBPC10 (Leave Accrual and Quota Deduction).**D.** Configure feature QUOMO (Determination of Quota Type Selection Rule Group) and run program RPTBPC10 (Leave Accrual and Quota Deduction).**Answer: B**

NEW QUESTION: 2

ネットワークベースのマルウェアを検出するために、ファイアウォールポリシーで構成できる3つの要素は何ですか？（3つ選択してください。）**A.** ファイル内に保存されているメタデータ**B.** 一般的に使用されるレインボーハッシュテーブル**C.** アクセス制御リスト（ACL）**D.** SHA-256ハッシュ**E.** 一般的に使用されるプロトコル**Answer: A,D,E**

NEW QUESTION: 3Which two options describe best practices that must be completed after a wireless installation is finished?(Choose two.)**A.** Spend time with the customer to show them the controller GUI and inform them how they can reach theCisco TAC if they have any problems.**B.** Make sure that there are no spaces between the devices on the rack that the Wireless Lan Controller is installed.**C.** Test all the customer's wireless devices and applications to ensure they are working properly.**D.** Make sure the customer is aware that they should consider purchasing a support contract immediately afterthe installation is complete.**E.**

Consult with the customer to ensure that the IT staff has a complete set of design and installation documents. **Answer: C,E**

NEW QUESTION: 4 You are deploying the web-based solution in the West Europe region. You need to copy the repository of existing works that the plagiarism detection service uses. You must achieve this goal by using the least amount of time. What should you do? **A.** Use the Asynchronous Blob Copy API to copy the blobs from the source storage account to a storage account in the West Europe region. **B.** Create an Azure virtual network to connect to the West Europe region. Then use Robocopy to copy the files from the current region to the West Europe region. **C.** Copy the files from the source file share to a local hard disk. Ship the hard disk to the West Europe data center by using the Azure Import/Export service. **D.** Provide access to the blobs by using the Microsoft Azure Content Delivery Network (CDN). Modify the plagiarism detection service so that the files from the repository are loaded from the CDN. **Answer: A**

Explanation: Ref:

<http://blogs.msdn.com/b/windowsazurestorage/archive/2012/06/12/introducing-asynchronous-cross-account-copy-blob.aspx>

=====**Topic 1, Web-based Solution**
Background You are developing a web-based solution that students and teachers can use to collaborate on written assignments. Teachers can also use the solution to detect potential plagiarism, and they can manage assignments and data by using locally accessible network shares.
Business Requirements The solution consists of three parts: a website where students work on assignments and where teachers view and grade assignments, the plagiarism detection service, and a connector service to manage data by using a network share. The system availability agreement states that operating hours are weekdays between midnight on Sunday and midnight on Friday.
Plagiarism Service The plagiarism detection portion of the solution compares a new work against a repository of existing works. The initial dataset contains a large database of existing works. Teachers upload additional works. In addition, the service itself searches for other works and adds those works to the repository.
Technical Requirements
Website The website for the solution must run on an Azure web role.
Plagiarism Service The plagiarism detection service runs on an Azure worker role. The computation uses a random number generator. Certain values can result in an infinite loop, so if a particular work item takes longer than one hour to process, other instances of the service must be able to process the work item. The Azure worker role must fully utilize all available CPU cores. Computation results are cached in local storage resources to reduce computation time.
Repository of Existing Works The plagiarism detection service works by comparing student submissions against a repository of existing works by using a custom matching algorithm. The master copies of the works are stored in Azure blob storage. A daily process synchronizes files between blob storage and a file share on a virtual machine (VM). As part of this synchronization, the ExistingWorkRepository object adds the files to Azure Cache to improve the display performance of the website. If a student's submission is overdue, the Late property is set to the number of days that the work is overdue. Work files can be downloaded by using the Work action of the TeacherController object.
Network Connector Clients can interact with files that are stored on the VM by using a network share. The network permissions are configured in a startup task in the plagiarism detection service.
Service Monitoring The CPU of the system on which the plagiarism detection service runs usually limits the plagiarism detection service. However, certain combinations of input can cause memory issues, which results in decreased performance. The average time for a given computation is 45 seconds. Unexpected results during computations might cause a memory dump. Memory dump files are stored in the Windows temporary folder on the VM that hosts the worker role.
Security Only valid users of the solution must be able to view content that users submit. Privacy regulations require that all content that users submit must be retained only in Azure Storage. All documents that students upload must be signed by using a certificate named DocCert that is installed in both the worker role and the web role.
Solution Development You use Microsoft Visual Studio 2013 and the Azure

emulator to develop and test both the compute component and the storage component. New versions of the solution must undergo testing by using production data. Scaling During non-operating hours, the plagiarism detection service should not use more than 40 CPU cores. During operating hours, the plagiarism detection service should automatically scale when 500 work items are waiting to be processed. To facilitate maintenance of the system, no plagiarism detection work should occur during non-operating hours. All ASP.NET MVC actions must support files that are up to 2 GB in size. Biographical Information Biographical information about students and teachers is stored in a Microsoft Azure SQL database. All services run in the US West region. The plagiarism detection service runs on Extra Large instances. Solution Structure Relevant portions of the solution files are shown in the following code segments. Line numbers in the code segments are included for reference only and include a two-character prefix that denotes the specific file to which the line belongs.
