Once you pay for it, our system will send [D-PST-MN-A-24 Test Question](#) you an email quickly, When you are choosing good site, it's happier to shop then bad ones, How can we do this, All your confusion and worries will be driven away when you choose AZ-204 training vce pdf.

NEW QUESTION: 1A customer has configured Onboard with Single SSID provision for Aruba IAP Windows devices work as expected but cannot get the Apple iOS devices to work. The Apple iOS devices automatically get redirected to a blank page and do not get the Onboard portal page. What would you check to fix the issue?**A.** Verify if Onboard Pre-Provisioning enforcement profile sends the correct Aruba user role.**B.** Verify if the Onboard URL is updated correctly in the external captive portal profile.**C.** Verify if the external captive portal profile is enabled to use HTTPS with port 443.**D.** Verify if the checkbox "Enable bypassing the Apple Captive Network Assistant" is checked.**Answer: B**

NEW QUESTION: 2You have the following code (line numbers are included for reference only):
You need to ensure that new instances of Connection can be created only by other classes by calling the Create method. The solution must allow classes to inherit from Connection.What should you do?**A.** Option **DB.** Option **AC.** Option **BD.** Option **C****Answer: C****Explanation:**
ExplanationThe following list provides the main features of a static class:
* Contains only static members.
* Cannot be instantiated.
* Is sealed.
* Cannot contain Instance Constructors.
Creating a static class is therefore basically the same as creating a class that contains only static members and a private constructor. A private constructor prevents the class from being instantiated.
Incorrect:Not A: An abstract method is a method that is declared without an implementation.
Not C: Private methods can be called from derived classes.
Reference: Static Classes and Static Class Members (C# Programming Guide)

NEW QUESTION: 3Task: Determine the types of attacks below by selecting an option from the dropdown list.**Answer:** Explanation:ExplanationA: Phishing is the act of sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft. Phishing email will direct the user to visit a website where they are asked to update personal information, such as a password, credit card, social security, or bank account numbers, that the legitimate organization already has. The website, however, is bogus and set up only to steal the information the user enters on the page.**B:** Whaling is a specific kind of malicious hacking within the more general category of phishing, which involves hunting for data that can be used by the hacker. In general, phishing efforts are focused on collecting personal data about users. In whaling, the targets are high-ranking bankers, executives or others in powerful positions or job titles. Hackers who engage in whaling often describe these efforts as "reeling in a big fish," applying a familiar metaphor to the process of scouring technologies for loopholes and opportunities for data theft. Those who are engaged in whaling may, for example, hack into specific networks where these powerful individuals work or store sensitive data. They may also set up keylogging or other malware on a work station associated with one of these executives. There are many ways that hackers can pursue whaling, leading C-level or top-level executives in business and government to stay vigilant about the possibility of cyber threats.**C:** Vishing is the act of using the telephone in an attempt to scam the user into surrendering private information

that will be used for identity theft. The scammer usually pretends to be a legitimate business, and fools the victim into thinking he or she will profit. D: SPIM is a term sometimes used to refer to spam over IM (Instant Messaging). It's also called just spam, instant spam, or IM marketing. No matter what the name, it consists of unwanted messages transmitted through some form of instant messaging service, which can include Short Message Service (SMS) E: Social engineering is a non-technical method of intrusion hackers use that relies heavily on human interaction and often involves tricking people into breaking normal security procedures. It is one of the greatest threats that organizations today encounter. A social engineer runs what used to be called a "con game." For example, a person using social engineering to break into a computer network might try to gain the confidence of an authorized user and get them to reveal information that compromises the network's security. Social engineers often rely on the natural helpfulness of people as well as on their weaknesses. They might, for example, call the authorized employee with some kind of urgent problem that requires immediate network access. Appealing to vanity, appealing to authority, appealing to greed, and old-fashioned eavesdropping are other typical social engineering techniques. <http://www.webopedia.com/TERM/P/phishing.html>
