また、選択したいいつでも1日に1回実行する必要がある他の無関係なバッチジョブもあります。コストをどのように最小化すべきですか? **A.**

Explanation: Because the instance will always be online during the day, in a predictable manner, and there are a sequence of batch jobs to perform at any time, we should run the batch jobs when the account software is off. We can achieve Heavy Utilization by alternating these times, so we should purchase the reservation as such, as this represents the lowest cost. There is no such thing a "Full" level utilization purchases on EC2.

NEW QUESTION: 4 You are designing a plan for migrating Virtual Hard Disks (VHDs) and video files to Windows Azure Storage. The VHDs must be optimized for random read/write operation. The video files must be optimized for sequential access. You need to recommend storage types for storing the VHDs and video files. Which two storage types should you recommend? (Each correct answer presents part of the solution. Choose two.)
A. Store video files in Windows Azure block blob storage.
B. Store VHDs in Windows Azure page blob storage.
C. Store video files in Windows Azure page blob storage.
D. Store VHDs in Windows Azure block blob storage.
Answer: A,B
Explanation: Explanation/Reference: Explanation: You can store text and binary data in either of two types of blobs: Block blobs, which are optimized for streaming. Page blobs, which are optimized for random read/write operations and which provide the ability to write to a range of bytes in a blob. After you create or change the server image, you are ready to upload the .vhd file that contains the image data to Windows Azure. There are two opportunities for uploading VHDs to Windows Azure. When you initially create a VM role, you upload a base VHD to Windows Azure, which is used as a template to create VM role instances.
