NEW QUESTION: 1You have a SQL Server 2016 database named DB1.You plan to import a large number of records from a SQL Azure database to DB1.You need to recommend a solution to minimize the amount of space used in the transaction log during the import operation.What should you include in the recommendation?**A.** A new file group**B.** A new partitioned table**C.** The full recovery model**D.** The bulk-logged recovery model**E.** A new log file**Answer: D****Explanation:** Compared to the full recovery model, which fully logs all transactions, the bulk-logged recovery model minimally logs bulk operations, although fully logging other transactions. The bulk-logged recovery model protects against media failure and, for bulk operations, provides the best performance and least log space usage.**Note:** The bulk-logged recovery model is a special-purpose recovery model that should be used only intermittently to improve the performance of certain large-scale bulk operations, such as bulk imports of large amounts of data.**References:** [https://technet.microsoft.com/en-us/library/ms190692\(v=sql.105\).aspx](https://technet.microsoft.com/en-us/library/ms190692(v=sql.105).aspx)

NEW QUESTION: 2Scenario 1You have a customer with a large IBM Lotus Domino environment.

The customer is in the process of migrating from a UNIX to a Microsoft Windows infrastructure. As part of this process, they are going to perform a refresh of the hardware and software that Domino is running on. In addition, they will migrate all client backups to a new EMC NetWorker environment. The new backup environment consists of a NetWorker server and two storage nodes running on Windows 2008. The Domino environment consists of a single server running two instances of Domino. The total amount of data that needs to be backed up is approximately 900 GB. The Domino server will have connections to both the SAN and the LAN. They would like to perform hot backups of the databases using the NMDA but are leaving specific design decisions to you. Additionally, the customer would like to send all data to disk for onsite backups and clone the first full backup of the year to tape for long-term offsite retention. The backup target infrastructure consists of a single Quantum i2000 tape library with six LTO-4 tape drives in addition to two EMC Data Domain 890s. One Data Domain will be located at their primary site. The second Data Domain is at the disaster recovery (DR) site as a replication target for the first. One of the customer's major concerns is the backup speed of the Domino environment. They are interested in any best practices they can implement to improve backup performance at the Domino level. Furthermore, they are looking for guidance in using NMDA to backup the data and leverage their backup infrastructure in the most efficient way. Refer to Scenario 1. The customer has configured the Domino servers and would like to perform a full backup. By default, which data will be included in a full backup? **A.** All Lotus Domino documents and transaction logs **B.** All files in the Lotus Domino DAOS directory **C.** All database objects and transaction logs **D.** All database objects **Answer: D**

NEW QUESTION: 3 RACIマトリックスの「R」ロールの正しいものはどれですか? **A.** この役割は、アクティビティが正しく実行されることを保証します **B.** この役割は、利害関係者への情報の流れを保証します **C.** この役割は、知識とインプットの提供に関係しています **D.** このロールには最終結果の所有権があります **Answer: D**

NEW QUESTION: 4 Synonym requires additional storage other than its definition in the data dictionary. **A.** True **B.** False **Answer: B**
