### NEW QUESTION: 1

データセットの構造が一致するように、メタデータの編集モジュールを構成する必要があります。どの構成オプションを選択する必要がありますか？回答するには、回答領域で適切なオプションを選択します。注：それぞれの正しい選択は1ポイントの価値があります。**Answer:** Explanation: Explanation: Box 1: Floating point Need floating point for Median values. Scenario: An initial investigation shows that the datasets are identical in structure apart from the MedianValue column. The smaller Paris dataset contains the MedianValue in text format, whereas the larger London dataset contains the MedianValue in numerical format. Box 2: Unchanged Note: Select the Categorical option to specify that the values in the selected columns should be treated as categories. For example, you might have a column that contains the numbers 0,1 and 2, but know that the numbers actually mean "Smoker", "Non smoker" and "Unknown". In that case, by flagging the column as categorical you can ensure that the values are not used in numeric calculations, only to group data.

**NEW QUESTION: 2** You administer an online transaction processing (OLTP) system whose database is stored in Automatic Storage Management (ASM) and whose disk group use normal redundancy. One of the ASM disks goes offline, and is then dropped because it was not brought online before DISK\_REPAIR\_TIME elapsed. When the disk is replaced and added back to the disk group, the ensuing rebalance operation is too slow. Which two recommendations should you make to speed up the rebalance operation if this type of failure happens again? **A.** Set the DISK\_REPAIR\_TIME disk attribute to a lower value. **B.** Increase the number of ASMB processes. **C.** Increase the number of DBWR\_IO\_SLAVES in the ASM instance. **D.** Increase the value of the ASM\_POWER\_LIMIT parameter. **E.** Specify the statement that adds the disk back to the disk group. **Answer: B, D** Explanation: **A:** ASM\_POWER\_LIMIT specifies the maximum power on an Automatic Storage Management instance for disk rebalancing. The higher the limit, the faster rebalancing will complete. Lower values will take longer, but consume fewer processing and I/O resources. **D:** \*Normally a separate process is fired up to do that rebalance. This will take a certain amount of time. If you want it to happen faster, fire up more processes. You tell ASM it can add more processes by increasing the rebalance power. \*ASMB ASM Background Process Communicates with the ASM instance, managing storage and providing statistics Incorrect: Not B: A higher, not a lower, value of DISK\_REPAIR\_TIME would be helpful here. Not E: If you implement database writer I/O slaves by setting the DBWR\_IO\_SLAVES parameter, you configure a single (master) DBWR process that has slave processes that are subservient to it. In addition, I/O slaves can be used to "simulate" asynchronous I/O on platforms that do not support asynchronous I/O or implement it inefficiently. Database I/O slaves provide non-blocking, asynchronous requests to simulate asynchronous I/O.

**NEW QUESTION: 3** A customer wants to extend the functionality of the SAP Hybris Commerce accelerator without touching its core code base. What solution do you recommend to the customer? **A.** Java library. **B.** AddOn. **C.** A new Accelerator. **D.** Module. **Answer: B**

**NEW QUESTION: 4** Which three tasks are required for the deployment and routing of email in Avaya Oceana\*? (Choose three.) **A.** Provide agent with third party email Inbox. **B.** Deploy the email service snap-In. **C.** Configure email servers. **D.** Deploy ED Email Flow. **E.** Deploy ED Chat Flow. **Answer: A,C,E**
