NEW QUESTION: 1Your network consists of one domain. The domain contains a server that runs Windows Server 2008 R2. The server is configured as a Routing and Remote Access Services (RRAS) server. Your company has portable computers and desktop computers that run Windows 7. Users use company-issued portable computers to connect to the network remotely through a virtual private network (VPN) connection to the RRAS server. The desktop computers are seldom turned on and only connect to the network locally. You need to plan a security solution for the network to meet the following requirements: - Notifications must be sent to desktop computers when new updates are available for download. - Only computers that have the most up-to-date updates installed must be allowed to connect to the network remotely. What should you include in your plan? **A.** Install a Windows Server Update Services (WSUS) server on the internal network. Create a Group Policy object (GPO) linked to the domain. Enable WSUS settings in the GPO. **B.** Install a Windows Server Update Services (WSUS) server on the perimeter network. Create a Group Policy object (GPO) linked to the domain. Enable WSUS settings in the GPO. **C.** Implement a Remote Authentication Dial-In User Server (RADIUS) on the perimeter network. **D.** Implement Network Access Protection (NAP) on the internal network and the perimeter network. **Answer: D**
