in Control Panel Network and Internet Network Connections so if a virtual machine needs contact outside the host machine this one is a must. Internal - This virtual switch can be used to connect all virtual machines and the host machine but cannot go outside that. Private - This virtual switch can only be used by the virtual host. There, all files belong to the user and group root and are not read- or writable to any other users in the system. **D.** The mount.cifs command must always be executed by the user who should use the mount afterwards. The user should be granted the required permission in /etc/sudoers.
