**NEW QUESTION: 1**You deploy Windows 7 to the computers that are used by your company's Web developers. All Web developer user accounts are in a single organizational unit (OU). Internet Explorer is blocking pop-up windows for multiple internal Web applications that are hosted on different servers.You need to use Group Policy to ensure that Internet Explorer does not block pop-up windows for internal Web applications.What should you do?**A.** Add each server to the Trusted Sites zone.**B.** Enable Compatibility View in Internet Explorer.**C.** Add each server to the Intranet zone.**D.** Set the default security setting in Internet Explorer to Medium.

**Answer: C**Explanation:Pop-up Blocker featuresPop-up Blocker is turned on by default. There are restrictions on the size and position of pop-up windows, regardless of the Pop-up Blocker setting. Pop-up windows cannot be opened larger than or outside the viewable desktop area. For more information, see "Windows Restrictions" in this document. When this functionality is enabled, automatic and background pop-up windows are blocked, but windows that are opened by a user click will still open in the usual manner. Note that sites in the Trusted Sites and Local Intranet zones do not have their pop-up windows blocked by default, as they are considered safe. This setting can be configured in the Security tab in Internet Options.  
[http://technet.microsoft.com/en-us/library/cc784600\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc784600(v=ws.10).aspx) hints: internal web, so I choose intranet zones.**Local Intranet Zone**By default, the Local Intranet zone contains all network connections that were established by using a Universal Naming Convention (UNC) path, and Web sites that bypass the proxy server or have names that do not include periods (for example, <http://local>), as long as they are not assigned to either the Restricted Sites or Trusted Sites zone. The default security level for the Local Intranet zone is set to Medium (Internet Explorer 4) or Medium-low (Internet Explorer 5 and 6). Be aware that when you access a local area network (LAN) or an intranet share, or an intranet Web site by using an Internet Protocol (IP) address or by using a fully qualified domain name (FQDN), the share or Web site is identified as being in the Internet zone instead of in the Local intranet zone.**Trusted Sites Zone** This zone contains Web sites that you trust as safe (such as Web sites that are on your organization's intranet or that come from established companies in whom you have confidence). When you add a Web site to the Trusted Sites zone, you believe that files you download or that you run from the Web site will not damage your computer or data. By default, there are no Web sites that are assigned to the Trusted Sites zone, and the security level is set to Low.<http://support.microsoft.com/kb/174360>

**NEW QUESTION: 2**What must the Linux administrator ensure when creating a Linux user on the host?**A.** The user account is created on the active and standby server.**B.** The user account is provided super-user privileges.**C.** The user account password is at least 8 characters in length.**D.** The user account exists in the LDAP authentication server.**Answer: A**

**NEW QUESTION: 3****HOTSPOT**Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in

each question in this series. Start of repeated scenario. You are a database administrator for a company that has on-premises Microsoft SQL Server environment. There are two domains in separate forests. There are no trust relationships between the domains. The environment hosts several customer databases, and each customer uses a dedicated instance running SQL Server 2016 Standard edition. The customer environments are shown in the following table. End of repeated scenario. You need to configure auditing for WDWDB. In the table below, identify the event type that you must audit for each activity. NOTE: Make only one selection in each column. **Answer:** Explanation: Explanation: You must log any deletion of views and all database record update operations.
