NEW QUESTION: 1You have been asked to leverage Amazon VPC BC2 and SOS to implement an application that submits and receives millions of messages per second to a message queue. You want to ensure your application has sufficient bandwidth between your EC2 instances and SQS. Which option will provide the most scalable solution for communicating between the application and SQS?
A. Ensure the application instances are launched in public subnets with the `associate-public-IP-address=true` option enabled
B. Ensure the application instances are launched in private subnets with the `EBS-optimized` option enabled
C. Ensure the application instances are properly configured with an Elastic Load Balancer
D. Launch application instances in private subnets with an Auto Scaling group and Auto Scaling triggers configured to watch the SQS queue size
Answer: D
Explanation: Explanation The question is about most "scalable solution for communicating" for SQS that is parallel processing of SQS messages. See also:- <https://aws.amazon.com/articles/1464-http://docs.aws.amazon.com/AWSSimpleQueueService/latest/SQSDeveloperGuide/throughput.html>
