NEW QUESTION: 1 Refer to the exhibit. Which prefix does Router 1 use for traffic to Host A? **A.** 10.10.13.0/25 **B.** 10.10.10.0/28 **C.** 10.10.13.144/28 **D.** 10.10.13.208/29 **Answer: D** Explanation: Host A address fall within the address range. However, if more than one route to the same subnet exist (router will use the longest stick match, which match more specific route to the subnet). If there are route 10.10.13.192/26 and 10.10.13.208/29, the router will forward the packet to /29 rather than /28.

NEW QUESTION: 2 Given: Which two actions, used independently, will permit this class to compile? **A.** Adding throws IOException to the main() method signature **B.** Adding throws IOException to the dosomething() method signature and changing the catch argument to IOException **C.** Adding throws IOException to the doSoomething() method signature **D.** Adding throws IOException to the main() method signature and changing the catch argument to IOException **E.** Adding throws IOException to the main() method signature and to the dosomething() method **Answer: B,E**

NEW QUESTION: 3 On a Cisco autonomous AP, the maximum number of attempts to send a packet (packet retries) is set to 32 by default. Which statement about the result when the AP has tried to send a packet for that number of attempts and no response is received from the client is true? **A.** The client MAC address is excluded for 60 seconds. **B.** The access point drops the packet. **C.** The access point disassociates the client. **D.** The access point resets the radio interface.

Answer: B Explanation: From: Packet Retries & Max-Retries | mnrn-cciew

<https://mnrncciew.com/2013/06/16/packet-retries-max-retries/> In Autonomous (IOS) AP, you can configure number of attempts the wireless device makes to send a packet before giving up & dropping the packet. There are two ways of configuring this feature. One method for best effort (priority value 0) traffic & another method for non-best effort (priority value 1-7) 1. Best-effort Traffic (packet retries command) 2. Non-Best-effort Traffic (packet max-retries command) CLI default: packet retries 32 drop-packet channel width 40-above channel dfs station-rolleroot rts retries 32 cfg:

http://www.cisco.com/c/en/us/td/docs/wireless/access_point/15-3-3/configuration/guide/cg15-3-3/cg15-3-3-chap6-radio.html Configuring the Maximum Data Packet Retries The maximum data retries setting determines the number of attempts the makes to send a packet before giving up and dropping the packet. The default setting is 32. Beginning in privileged EXEC mode
