NEW QUESTION: 1You plan to publish a label that will retain documents in Microsoft OneDrive for two years, and then automatically delete the documents. You need to create the label. To complete this task, sign in to the Microsoft Office 365 portal. **Answer:** Explanation: See explanation below. Explanation You need to create a retention label. Go to the Security & Compliance Admin Center. Navigate to Classification > Retention labels. Click on + Create a label to create a new label. Give the label a name and click Next. On the File plan descriptors, leave all options empty. The options in this page are used for auto-applying the retention label. Click Next. Turn the Retentions switch to On. Under Retain the content, set the period to 2 years. Under What do you want to do after this time?, Delete the content automatically option. Click Next. Click the Create this label button to create the label. The label is now ready to be published to Microsoft OneDrive.

NEW QUESTION: 2Which command should an administrator use to recreate the /etc/vx/volboot file in a Veritas Volume Manager environment where root disk is encapsulated? **A. vxconfig B. vxedit C. vxdctl D. vxdiskadm** **Answer: C**

NEW QUESTION: 3Your network consists of two Active Directory forests named Forest1 and Forest2. The functional level of both forests is Windows Server 2003. Both forests contain only domain controllers that run Windows Server 2008. You install a new server named Server1 in Forest2. You need to recommend an access solution that meets the following requirements: -Users in Forest1 must have access to resources on Server1. -Users in Forest1 must be denied access to all other resources within Forest2. What should you recommend? **A. Create a forest trust between Forest1 and Forest2. Set the Allowed to Authenticate right on the computer object for the Forest2 infrastructure operations master object. B. Raise the forest functional level of Forest1 and Forest2 to Windows Server 2008. C. Create a forest trust between Forest1 and Forest2. Set the Allowed to Authenticate right on the computer object for Server1. D. Raise the domain functional level of all domains in both forests to Windows Server 2008.** **Answer: C** Explanation: To ensure that the users in Forest1 are denied access to all the resources Forest2

except the resources on Server1, you need to create a forest trust between Forest1 and Forest2 so that resources can be shared between both the forests. You can however set the trust authentication setting to selective authentication so that only selected authentication is allowed. Next you need to set the Allowed to Authenticate right on the computer object for Server1 so that each user must be explicitly granted the Allowed to Authenticate permission to access resources on Server1. You should not set the Allowed to Authenticate right on the computer object for the Forest2 infrastructure operations master object because Allowed to Authenticate right is set for the users in a trusted Windows Server 2003 domain or forest to be able to access resources in a trusting Windows Server 2003 domain or forest, where the trust authentication setting has been set to `Allowed to Authenticate' selective authentication, each user must be explicitly granted the permission on the security descriptor of the computer objects (resource computers) that reside in the trusting domain or forest. Reference: Grant the Allowed to Authenticate permission on computers in the trusting domain or forest <http://technet2.microsoft.com/windowsserver/en/library/b4d96434-0fde-4370-bd2939e4b3cc7da81033.msp?mfr=true>

NEW QUESTION: 4 A new router is added to an existing HSRP standby group. One of the existing routers is in an active state, the other is in a standby state. Under what circumstance will the new router become the active router? **A.** The new router has preempt configured and a higher priority **B.** The new router has a higher priority value. **C.** The new router has a lower priority value. **D.** The new router can become active only when the existing active router and the existing standby router become unavailable. **E.** The new router will never become active unless the existing active router becomes unavailable. **F.** The new router will become active immediately because it's the newest router introduced into the group. **Answer: A**
