Dies kann einige Minuten dauern, und die Wartezeit wird nicht von Ihrer gesamten Testzeit abgezogen. Wenn die Schaltfläche Weiter verfügbar ist, klicken Sie darauf, um auf den Laborabschnitt zuzugreifen. In diesem Abschnitt führen Sie eine Reihe von Aufgaben in einer Live-Umgebung aus. Während Ihnen die meisten Funktionen wie in einer Live-Umgebung zur Verfügung stehen, sind einige Funktionen (z. B. Kopieren und Einfügen, Navigieren zu externen Websites) nicht beabsichtigt. **NEW QUESTION: 3**Answer: Explanation:Explanation

**NEW QUESTION: 4**You administer a Microsoft SQL Server database server. One of the databases on the server supports a highly active OLTP application. Users report abnormally long wait times when they submit data into the application. You need to identify which queries are taking longer than 1 second to run over an extended period of time. What should you do?**A.** use SQL Profiler to trace all queries that are processing on the server. Filter queries that have a Duration value of more than 1,000.**B.** Use sp\_configure to set a value for blocked process threshold. Create an extended event session.**C.** Use the Job Activity monitor to review all processes that are actively running. Review the Job History to find out the duration of each step.**D.** Run the DBCC TRACEON 1222 command from a query window and review the SQL Server event log.**E.** Run the sp\_who command from a query window.**Answer: A**Explanation: Use SQL Profiler to trace all queries that are processing on the server. Filter queries that have a Duration value of more than 1,000. Incorrect: Not B: The SQL Server lock monitor is responsible for implementing the logic to detect a blocking scenario if the 'blocked process threshold' value is greater than 0. However, the lock monitor only wakes up every 5 seconds to detect this condition (it is also looking for other conditions such as deadlocks). Therefore, if you set a 'blocked process threshold' value to 1, it will not detect a process that has been blocking for 1 second. The minimum time it can detect a blocked process is 5 seconds. Not E: The Traceflag 1222 Shows Deadlocks, not the Duration of an query. References: <https://docs.microsoft.com/en-us/sql/tools/sql-server-profiler/sql-server-profiler>
