NEW QUESTION: 3How many non-overlapping channels are available on the 2.4 GHz regulatory wireless band?**A. 0B. 1C. 2D. 3Answer: B**

NEW QUESTION: 4Which best describes the svc:/system/boot-config service?**A.** It is used to change the milestone on a system.**B.** It provides the parameters used to set the system to automatically perform a fast or slow reboot.**C.** It is used to set the default run level of the system.**D.** When the service is enabled, the system performs a fast reboot by default; when it is disable the system performs a slow reboot by default.**Answer: B****Explanation:**

Explanation/Reference:Explanation:Starting with the Oracle Solaris 11 Express release, Fast Reboot is supported on the SPARC platform, as well as the x86 platform. On both platforms, this feature is controlled by the SMF and implemented through a boot configuration service, svc:/system/boot-config. The boot-config service provides a means for setting or changing the default boot configuration parameters.The fastreboot_default property of the boot-config service enables an automatic fast reboot of the system when either the reboot or the init 6 command is used. When the config/fastreboot_default property is set to true the system automatically performs a fast reboot, without the need to use the reboot -f command. By default, this property's value is set to false on the SPARC platform and to true on the x86 platform.
