The MFA device can either be a special piece of hardware, or it can be a virtual device (for example, it can run in an app on a smartphone). Options C is invalid because these options are not available Option D is invalid because there is not root access for users For more information on IAM best practices, please visit the below URL: <https://docs.aws.amazon.com/IAM/latest/UserGuide/best-practices.html> The correct answer is: Modify the Network ACLs associated with all public subnets in the VPC to deny access from the IP Address block. omit your Feedback/Queries to our Experts
