The insertion of the Client IP address into the header allows the exchange servers to see the IP that made the

connection. Level 4 Load Balancer: A load balancer is a server computer with a very specialized operating system tuned to manage network traffic using user-created rules. Enterprises and hosting companies rely on load-balancing devices to distribute traffic to create highly available services. L4 load balancing is fairly simple, two servers sharing the same IP address. You get redirected to the less-busy server. The most popular Layer 4 load balancing techniques are: round-robin, weighted round-robin, least connections, and weighted least connections.
