Which is the best Selling HP Component MPS (cMPS) 2024 dumps exam questions, [HP2-I60](#) HP certifications have turned into an important aspect in the careers of workers, Be ready to have perfect preparation for the HP2-I60 updated audio training through the great and superb helping tools of Estruturit.

Your satisfaction is the greatest affirmation for us and we sincerely serve you, HP2-I60 beta exam is totally free of cost to take, If your mind has made up then our HP2-I60 study tools will not let you down.

NEW QUESTION: 1Your cluster Mode size is set to 128MB. A client application (client application A) is writing a 500MB file to HDFS. After client application A has written 300MB of data, another client (client application B) attempts to read the file. What is the effect of a second client requesting a file during a write?**A.** Client application on B can read the 300MB that has been written so far.**B.** Client application B returns an error**C.** Client application B must wait until the entire file has been written, and will then read its entire contents.**D.** Application B can read 256MB of the file**Answer: C**

NEW QUESTION: 2Note: This question is part of a series of questions that use the same set of answers choices. An answer choice may be correct for more than one question in the series.You administer a Microsoft SQL Server server that hosts a transactional database and a reporting database. The transactional database is updated through a web application and is operational throughout the day. The reporting database is only updated from the transactional database. The recovery model and backup schedule are configured as shown in the following table:One of the hard disk drives that stores the reporting database fails at 23:32 hours.You need to ensure that the reporting database is restored. You also need to ensure that data loss is minimal.What should you do?**A.** Restore the latest full backup, and restore the latest differential backup. Then, restore each log backup taken before the time of failure from the most recent differential backup.**B.** Perform a page restore.**C.** Restore the latest full backup. Then, restore the latest differential backup.**D.** Perform a point-in-time restore.**E.** Restore the latest full backup. Then, restore each differential backup taken before the time of failure from the most recent full backup.**F.** Restore the latest full backup, and restore the latest differential backup. Then, restore the latest log backup.**G.** Restore the latest full backup.**H.** Perform a partial restore.

Answer: CExplanation:Explanation/Reference:Explanation:To recover the database, you must restore the latest full backup and then restore the latest differential backup.Incorrect Answers:
A: A page restore is used to repair isolated damaged pages. It is faster than a file restore id only a few individual pages are damaged.B: Partial restores allow a database that contains multiple filegroups to be restored and recovered in stages. It works with all recovery models, but is more flexible for the full and bulk-logged models than for the simple model.C: Point in time restores are not supported for the simple backup model as log files are not part of the backup.D: The latest full backup was performed at 01:00 hours, 22 hours and 32 minutes before the hard disk failure. A differential backup was made at 13:00 hours, 10 hours and 32 minutes before the hard disk failure. A differential backup contains data that has been added or updated since the last

full backup and should be restored to minimize data loss.F, G: There is not log backup in the simple backup model.H: Only the latest differential backup needs to be restored.References:

NEW QUESTION: 3Your company has an Azure Active Directory (Azure AD) tenant named contoso.com and a Microsoft 365 subscription.Contoso.com contains the users shown in the following table.You add an enterprise application named App1 to contoso.com.You configure the following self-service settings for App1:* Allow users to request access to this application is set to Yes.* To which group should assigned users be added is set to Group1.* Who is allowed to approve access to this application is set to User2.* Require approval before granting access to this application is set to Yes.For each of the following statements, select Yes if the statement is true. Otherwise, select No.NOTE: Each correct selection is worth one point.**Answer:**

Explanation:ExplanationBox 1: Yes.User1 can request access to App1 because "Allow users to request access to this application" is set to Yes.Box 2: No.User2 is an approver. If User2 requests access to App1, he will still need to approve the request before he is added to Group1.Box 3: Yes.User2 can approve requests for App1 because "Who is allowed to approve access to this application" is set to User2.Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/manage-self-service-access>

NEW QUESTION: 4Note This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.Start of Repeated Scenario:Your network contains an Active Directory domain named contoso.com The functional level of the forest and the domain is Windows Server 2008 R2 All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.The domain contains nine servers that are configured as shown in the following table.The virtual machines are configured as follows:* Each virtual machine has one virtual network adapter* VM1 and VM2 are part of a Network Load Balancing (NIB) cluster.* All of the servers on the network can communicate with all of the virtual machines.End of repeated Scenario.You need to minimize the likelihood that a virtual machine running malicious code will consume excessive resources on Server5.What should you do?**A.** Run the Set-VMProcessor cmdlet and specify the -MaximumCountPerNumaNode Parameter.**B.** Configure VM Network Adapter Isolation.**C.** Run the Set-VMProcessor cmdlet and specify the -EnableHostResourceProtection Parameter.**D.** Configure the virtual machines as shielded virtual machines.**Answer: C**
