NEW QUESTION: 3In 2001, Continental Supply Company was formed to provide drilling equipment and supplies to contractors and oilfield production companies located throughout the United States. At the end of 2005, Continental Supply created a wholly owned foreign subsidiary, International Oilfield Incorporated, to begin servicing customers located in the North Sea. International Oilfield maintains its financial statements in a currency known as the local currency unit (LCU). Continental Supply follows U.S. GAAP and its presentation currency is the U.S. dollar. For the years 2005 through 2008, the weighted-average and year-end exchange rates, stated in terms of local currency per U.S. dollar, were as follows: International Oilfield accounts for its inventory using the lower-of-cost-or-market valuation method in conjunction with the first-in, first-out, cost flow assumption. All of the inventory on hand at the beginning of the year was sold during 2008. Inventory remaining at the end of 2008 was acquired evenly throughout the year. At the beginning of 2006, International Oilfield purchased equipment totaling LCU 975 million when the exchange rate was LCU 1.00 to \$1. During 2007, equipment with an original cost of LCU 108 million was totally destroyed in a fire. At the end of 2007, International Oilfield received a LCU 92 million insurance settlement for the loss. On June 30, 2008, International Oilfield purchased equipment totaling LCU 225 million when the exchange rate was LCU 1.25 to \$1. For the years 2007 and 2008, Continental Supply reported International Oilfield revenues in its consolidated income statement of \$375 million and \$450 million, respectively. There were no inter-company transactions. Following are International Oilfield's balance sheets at the end of 2007 and 2008: At the end of 2008, International Oilfield's retained earnings account was equal to \$525 million and, to date, no dividends have been paid. All of International Oilfield's capital stock was issued at the end of 2005. Assuming that International Oilfield's equipment is depreciated using the straight-line method over ten years with no salvage value, calculate the subsidiary's 2008 depreciation expense under the temporal method. **A.** \$104.7 million. **B.** \$78.4 million. **C.** \$95.7 million. **Answer: C** Explanation: Explanation/Reference: Explanation: Temporal method; $[(975 \text{ million} - 108 \text{ million}) / 10 \text{ years} = \text{LCU } 86.7 \text{ million} / 1.00 = \$86.7 \text{ million}] + [(225 \text{ million} / 10 \text{ years}) \times \text{LCU } 1.25 = \$9 \text{ million}] = \$95.7 \text{ million. NEW QUESTION: 4You are the new database administrator for a SQL Server 2014 instance. You conduct an assessment on the instance and determine that the auto create statistics setting on the database named DB1 has been turned off. You see no evidence that any maintenance has been occurring. You want to set up monitoring to see if query performance is being affected. You need to set up a monitoring process that will capture any cases where statistics could have been useful if they existed. What should you do? **A.** Write a query using the sys.dm_db_missing_index_group_stats DMV Joining to sys.indexes, filtering on is_hypothetical. **B.** Create a SQL Server Agent job to execute DBCC SHOWSTATISTICS on each of the primary key columns in the database. **C.** Query the sys.statistics system view to see all cases where the statistics were last needed. **D.** Use the missing_column_statistics extended event. **Answer: D** Explanation: The Missing Column Statistics event class indicates that column statistics that could have been useful for the optimizer are not available. By monitoring the Missing Column Statistics event class, you can determine if there are statistics missing for a column used by a query. This can cause the optimizer to choose a less efficient query plan than expected.
