**NEW QUESTION: 1**You work in a company which uses SQL Server 2008. You are the administrator of the company database. Now you are in charge of a SQL Server 2008 instance. A new SQL Agent job has been created by you. The job includes a Windows PowerShell job step which transfer data between servers by using the SQLCmd utility. If the job fails, you must make sure that an operator named ReactGroup is informed by receiving an e-mail. So what action should you perform to achieve this goal?**A.** First you should configure the job step proxy account to use the ReactGroup operator account after you create the ReactGroup operator. At last choose the proxy account for the e-mail profile.**B.** First you should enable Notifications. Direct the Notification to the ReactGroup operator on failure of the Powershell job step after you create the ReactGroup operator.**C.** First you should assign the ReactGroup operator as the failsafe operator. Then enable the job after you create the ReactGroup operator.**D.** First you should enable Notifications. Direct the Notification to the ReactGroup operator on job failure after you create the ReactGroup operator.**Answer: D****Explanation:**In this case, you should add send job status to the operator via the following procedure: This topic describes how to set notification options so Microsoft SQL Server Agent can send notifications to operators about jobs. To notify an operator of job status 1. In Object Explorer, connect to an instance of the SQL Server Database Engine, and then expand that instance. 2. Expand SQL Server Agent, expand Jobs, right-click the job you want to edit, and select Properties. 3. In the Job Properties dialog box, select the Notifications page. 4. If you want to notify an operator by e-mail, check E-mail, select an operator from the list, and then select one of the following: When the job succeeds to notify the operator when the job completes successfully. When the job fails to notify the operator when the job completes unsuccessfully. When the job completes to notify the operator regardless of completion status. 5. If you want to notify an operator by pager, check Page, select an operator from the list, and then select one of the following: When the job succeeds to notify the operator when the job completes successfully. When the job fails to notify the operator when the job completes unsuccessfully. When the job completes to notify the operator regardless of completion status. 6. If you want to notify an operator by net send, check Net send,

select an operator from the list, and then select one of the following: When the job succeeds to notify the operator when the job completes successfully. When the job fails to notify the operator when the job completes unsuccessfully. When the job completes to notify the operator regardless of completion status.

**NEW QUESTION: 2** You are administering a database that supports a data warehousing workload and is running in noarchive log mode. You use RMAN to perform a level 0 backup on Sundays and level 1 incremental backups on all the other days of the week. One of the data files is corrupted and the current online redo log file is lost because of a media failure. Which action must you take for recovery? **A.** Restore all the data files, recover them by using the recover database noredo command, and use the resetlogs option to open the database. **B.** Restore the control file and all the data files, recover them by using the recover database noredo command, and use the resetlogs option to open the database. **C.** Restore the data file, recover it by using the recover datafile noredo command, and use the resetlogs option to open the database. **D.** Restore all the data files, recover them by using the recover database command, and open the database. **Answer: B**
